REPORT

TO

HIS EXCELLENCY GEORGE HENRY, EARL CADOGAN, K.G.,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit, for your Excellency's consideration, the Thirty-fifth Annual Report on Marriages, Births, and Deaths in Ireland.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1898 number 22,580; the Births 105,457; and the Deaths 82,404. The marriage-rate (4·97 per 1,000 of the estimated population) shows a slight decline as compared with that for the preceding year but is somewhat above the average rate for the ten years 1888–97; a like observation applies to the birth-rate (23·2 per 1,000); while the death-rate (18·1 per 1,000) is equal to the average rate for the ten years 1888–97, but slightly under the rate for the year 1897.

The recorded natural increase of population, or excess of births over deaths, was 23,053: the loss by emigration amounted to 32,241; there would thus appear to have been a decrease of 9,188 in the population during the year, but against this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year was 4,543,773.

TABLE I.—Showing for each of the years 1888–98, the estimated **Population**; the number of **Marriages, Births,** and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1888–97.

* See page 186.

There are 2,633 Local Registration Officers holding office directly under the Department or who have entered into bonds with the Registrar-General for the due discharge of their duties. During the year 1898, 553 cases of vacancies or appointments were dealt with.

I append a table showing the number of Searches made, and Certificates issued at the General Register Office; also the amount received as fees for same, in each year, since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864. The entries under these heads in 1898 are in excess of those for any earlier year.

TABLE II.—NUMBER of SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 35 years 1864–98.

During the financial year ended 31st March last 478 cases were reported of offences against the Acts administered by this Department. On careful inquiry into the circumstances, in 84 cases prosecutions were ordered to be instituted against the offenders. In 40 of these the parties were convicted and punished; in 39 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the aw; and in 3 cases the summonses were dismissed; one case was returned for trial, and one was pending at the close of the year.

The cases dealt with included the following offences:—Neglect to register Births; neglect to register Deaths; neglect to furnish Certificate of Marriage; failure of Coroner to furnish Certificate of Inquest; giving false information as to age at death, as to cause of death, and as to duration of illness; giving false information as to Births, viz.—registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Registrar to produce Quarterly Returns.

A general statement regarding the return of the various offences and the proceedings taken in connection therewith will be found at page 191.

MARRIAGES.

The number of Marriages registered during the year is 22,580, being equal to 4·97 per 1,000, of the estimated population,* a rate which is 0·06 below that for the previous year, but 0·28 above the average for the ten years 1888–97.

Of the 22,580 Marriages registered during last year 15,526 were between Roman Catholics; 3,625 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,509 were in Presbyterian Meeting-houses; 511 in "Registered Buildings" belonging to various religious denominations; only 390 by civil contract in the Registrars' offices; 9 were according to the usages of the Society of Friends; and 10 according to the Jewish rites.

The Roman Catholic Marriages are equal to a rate of 4·53 per 1,000 of the estimated number of Roman Catholics, being 0·28 over the corresponding average rate for the preceding ten years, and the other Marriages represent a rate of 6·31 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·22 over the corresponding average rate.

Of the 3,625 Marriages according to the rites of the Church of Ireland, 43 were by special licence, 3,099 by licence, 450 after the publication of banns, 8 on Registrar's certificate, and in 25 instances there was no information afforded as to which of these methods was adopted.

* Throughout this Report the rates for the total of Ireland are based on the estimated population in the middle of the respective years, and the rates for Provinces and Counties are based on the population according to the Census of 1891.

TABLE IV.—**Marriages** registered in Ireland in 1898 and each of the previous ten years, according to the **modes of celebration**; with the **rate** per 1,000 of the population represented:—

During the year 1898 there were issued by the Registrars 765 Licences for Marriages in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1898.	Number of Registered Meeting-houses on 31st December, 1898.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland, ...	153	583	2,371
2. Remonstrant Synod of Ulster, ...	8	19	27
3. Presbytery of Antrim, ...	5	10	20
4. United Presbytery or Synod of Munster, ...	2	2	.
Total, ...	168	614	2,418

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1898, there were 1,486 churches and chapels of the Church of Ireland, 614 registered Presbyterian Meeting-houses, and 394 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show a decrease of 1 as regards the Church of Ireland, an increase of 3 in the number of Presbyterian Meeting-houses, and an increase of 6 in the total number of "Registered Buildings."

The following statement shows the several religious bodies having "Registered Buildings" in 1898:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Place of Worship.
Methodists, . . .	234	Methodists, New Connexion,	7	United Original Seceders,	1
Reformed Presbyterians, .	38	Jews, ...	3	"Protestant Dissenters," .	1
Independents, . . .	25	"The Catholic Apostolic Church," . . .	2	Non-Subscribing Christians,	1
Baptists, . . .	24	Non-Subscribing Unitarians,	2	Independent Protestants, .	1
Christian Brethren, . .	14	Evangelical Union, . .	1	Congregational Union of Scotland, ...	1
Moravians, or United Brethren,	9	Unitarians, . . .	1	Undenominational, . . .	1
Seceders, ...	9	Covenanters, . . .	1		
United Presbyterians, .	9	Welsh Presbyterians, . .	1	Total, . .	394
Salvation Army, . .	8				

Of the 22,580 marriages registered during the year 1898 there were recorded—in the first quarter 7,154; in the second, 5,053; in the third, 5,159; and in the last, 5,214.

The marriages of bachelors and spinsters constitute 87·6 per cent. of the total; those of widowers and spinsters 8·0 per cent.; of bachelors and widows 2·6 per cent.; and of widowers and widows 1·8 per cent. Thus, 9·8 per cent. of the men married were widowers, and 4·4 per cent. of the women were widows; and in 12 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

TABLE V.—Showing by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1888–98, and the average number for the ten years 1888–97, distinguishing the number of Roman Catholic marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81:—

Year.	Marriages.

Equivalent Annual Rate per 1,000 living:— Average, 1888–97,	6·2	3·7	3·5	3·5	4·2	5·2	5·9	6·4	6·5	6·1	6·0	4·3	4·2	4·3	4·7
1898, . . .	6·7	3·8	3·8	3·8	4·5	5·0	6·3	6·8	7·1	6·3	6·3	4·4	4·5	4·6	5·0

A complete registry of the exact ages of the persons married would be valuable from many points of view: hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1898 the ages of both parties were specified in 3,865 cases only, being less than one-fifth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 22,580 men married during the year, 374, or 1·66 per cent., were minors; and of the women married, 1,782, or 7·89 per cent., were under age.

The highest proportion of husbands (2·04 per cent.), and of wives (9·29 per cent.), married under age in 1898 was in the province of Ulster.

It may be added that the per-centage of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificate, afford a rough test of the progress of elementary education. In the year 1898, 19,410, or 86·0 per cent., of the husbands, and 19,702, or 87·3 per cent., of the wives, wrote their names, and the remainder signed by marks.

These figures show a considerable improvement as compared with the corresponding results in the first of the preceding ten years, the per-centage of persons married in 1888 who wrote their names being—men 78·6, and women 76·8, and they exhibit a great advance when compared with the per-centage for the year 1864, when the general registration of marriages in Ireland was established, in which year but 61 in every 100 men, and 50 in every 100 women married wrote their names.

The per-centages for the several provinces last year range, for men, from 80 in Connaught to 89 in Munster, and, for women, from 84 in Ulster to 90 in Leinster and Munster.

In 1,240 cases both of the parties married signed the register by "mark," and in 3,568 the register was thus signed by either the husband or the wife, so that in 4,808 cases, or 21·3 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 17,772, or 78·7 per cent., *both* parties wrote their names.

The proportion per cent. of persons married in each of the eleven years 1888–98, who wrote their names in the registers or certificates, of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four provinces.

TABLE VI.—Showing as regards the **Marriages** in Ireland and in each of the Four Provinces during the years 1888–98, the proportion per cent. of Persons who **signed their Names,** of Persons **not of Full Age,** and of **Re-marriages.**

	1898,	79·6	85·7	0·90	6·40	9·32	3·48

In proportion to population at all ages, the registered marriages were most numerous in the province of Ulster, in which, however, the rate was only 5·7 per 1,000 of the population, according to the Census of 1891; Leinster comes next with 5·2 per 1,000; Munster third, with 4·1 per 1,000; and Connaught last, the rate being 3·2 per 1,000.

The highest rate for any county was 8·3 per 1,000 of the population in 1891, which was the marriage rate for Antrim; and the lowest 3·0 per 1,000, for Clare and Galway. Between these, the most favourable were 7·4 for Dublin, and 6·0 for Down; and the least so 3·1 for Roscommon, 3·3 for Mayo and Sligo, and 3·4 for Westmeath.

BIRTHS.

The number of births registered during the year 1898 is 105,457—54,254 boys and 51,203 girls, or 106·0 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 43·1, or 23·2 per thousand, which is 0·2 over the average rate per 1,000 for the ten years, 1888–97.

Of the 105,457 children whose births were registered in Ireland during the year 1898, 102,584, or 97·3 per cent. were legitimate, and 2,873, or 2·7 per cent., were illegitimate being equal to the corresponding average per-centages for the preceding 10 years. It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 52,766 were males, and 49,818 females, being 105·9 of the former to every 100 of the latter, and of the illegitimate children 1,488 were males, and 1,385 females, or 107·4 boys to 100 girls.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 3·7; in Leinster, 2·6; in Munster, 2·4; and in Connaught, 0·6.

TABLE VII.—The Per-centage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1894–98, by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.

LEINSTER, . . .	97·3	97·5	97·6	97·5	97·4	2·7	2·5	2·4	2·5	2·6
MUNSTER, . . .	97·8	97·7	97·7	97·6	97·6	2·2	2·3	2·3	2·4	2·4
ULSTER, ...	96·1	96·1	96·3	96·4	96·3	3·9	3·9	3·7	3·6	3·7
CONNAUGHT, . . .	99·3	99·3	99·4	99·3	99·4	0·7	0·7	0·6	0·7	0·6

The respective total birth-rates for the provinces in 1898 were—Leinster, 22·8 per 1,000 of the population in 1891; Munster, 20·9; Ulster, 24·4; and Connaught, 19·7.

The four counties having the highest rates are Antrim, 30·9 per 1,000 of the population in 1891; Dublin, 29·6; Down, 29·2; and Londonderry, 22·4. Those with the lowest rates are—Roscommon, 16·8; Fermanagh, 17·3; Cavan, 17·4; and Monaghan, 17·5.

Of the total births, 52·0 per cent. were registered in the first six months of the year (181 days), and 48·0 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 27,099 ; in the second, 27,751 ; in the third, 26,142 ; and in the fourth, 24,465.

DEATHS.

The number of deaths registered during the year is 82,404, being equal to 1 in 55·1 or 18·1 per 1,000 of the estimated population. The deaths of males number 40,738, and those of females 41,666, the former being equal to 18·0 in every 1,000 males living and the latter representing 18·3 per 1,000 females.

The death-rate (18·1) is equal to the average rate for the preceding ten years, but 0·3 under the rate for the year 1897.

As usual, very many of the Registrars furnished at the close of each quarter valuable notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this Department, and it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 13·8 ; that for Munster is 16·3 ; for Ulster, 18·4 ; and for Leinster, 19·8 per 1,000 of the population in 1891.

Of the thirty-two counties, the four having the lowest registered mortality are—Leitrim, 12·7 ; Donegal, 13·5 ; Longford, 13·7 ; and Roscommon, 13·7.

Those in which the rate was highest are—Dublin, 25·0; Antrim, 22·8; Down, 20·6; and Wexford, 19·7.

The deaths registered in the first half of the year generally outnumber those in the second. In 1898, 56·8 per cent. of the total deaths were registered in the six months, January to June inclusive, and 43·2 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follow:—First quarter, 21·5 per 1,000 of the population ; second, 19·7 ; third, 15·2 ; and fourth, 16·2. The rates for the second and third quarters are above, and those for the first and fourth are below, the corresponding average rates for the respective quarters in the ten years, 1888–97.

From the Table on pp. 174–183 *it will be seen that, of the* 82,404 *deaths registered during the year,* 2,446 *took place in Infirmaries and General and Special Hospitals ;* 1,111 *in Public Lunatic Asylums;* 10,123 *in Workhouses and Workhouse Hospitals; and* 68,724 *were of persons who died "At their Own Homes, &c." As in former Reports a Table (see pages* 184–5) *is given showing like information for those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situated.*

The deaths in "Infirmaries and General and Special Hospitals" constitute 3·0 per cent. of the total number, the per-centages for the four provinces varying from 0·6 in Connaught to 7·0 in Leinster. Over twelve per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being—Leinster, 14·5 ; Munster, 16·8 ; Ulster, 8·9 ; and Connaught, 8·5.

TABLE VIII.—Showing, by **Quarterly Periods**, the number of **Births** and **Deaths** registered in Ireland in each of the eleven years, 1888–98, and the average number for the ten years, 1888–97.

I.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The number of deaths from Specific Febrile or Zymotic diseases registered during the year 1898 was 9,192 (4,507 males and 4,685 females), or 202 in every 100,000 of the estimated population, being 59 over the number for the preceding year and 1,116, or 14 per cent., over the average for the ten years, 1888-97. The increase, as compared with the average, is mainly due to the widespread prevalence of Influenza, a heavy mortality from Enteric Fever in Belfast, and a high Diarrhœal death rate in Belfast and Dublin.

Of the 9,192 deaths from zymotic diseases 4,915, or 53·5 per cent., were amongst children under 10 years of age.

DEATH.

* See Note (*) on page 3

Small-pox.—No deaths from small-pox were registered in Ireland during the year 1898. During the preceding year there were but 3 deaths from the disease, and in the year 1896 4 only: in the year 1895 it caused 146 deaths, and in the year 1894 there were 72 deaths from it; but the total number for the six earlier years of the decennium 1888–97 was 11 only.

Measles.—The mortality from measles was far below the average in 1898, the number of deaths registered being 316 or little more than one-third of the average (884) for the preceding ten years, and showing a decline of 754 as compared with the number for the year 1897, during portions of which the disease was very prevalent in the larger cities and in a few other localities. Of the 316 deaths for last year 16 occurred in Ballina Union or Superintendent Registrar's District, 58 in Belfast Union, 18 in the Union of Belmullet, 49 in Limerick Union, 16 in Lurgan Union, 13 in Sligo Union, and 12 in Westport Union. The remaining 134 deaths were distributed over 53 Unions, and in 99 of the 159 Unions no fatal cases were recorded. The total number for the province of Leinster is 25; for Munster, 74; for Ulster, 98; and for Connaught, 119.

Scarlet Fever.—The number of deaths from scarlet fever is 325, being lower than the number for any preceding year since 1891, and 202, or 38 per cent., under the average for the ten years 1888–97. More than one-fourth of the 325 deaths occurred in the Dublin Registration Area, where the disease caused 92 deaths, and there were 21 deaths in Belfast Union, 14 in the Union of Kilmallock, and 11 in Naas, Parsonstown, and Skibbereen Unions respectively. The respective numbers for the provinces are—Leinster, 156; Munster, 64; Ulster, 82; and Connaught, 23.

Typhus caused 223 deaths, a number which, although 32 under the average for the ten years 1888–97, is higher than the number for any of the last three years of that period, and shows an increase of 102 as compared with the deaths from this cause in the year 1897. The greater part of the increase was in Munster, where there were 108 deaths against 39 for the year 1897. The number in Leinster was 19, or 3 under that for 1897; in Ulster 31, or 6 more than in 1897; and in Connaught 65, against 35 in 1897. The 108 deaths in Munster comprise 15 in Cahersiveen Union, 12 in Cork Union, 10 in Dungarvan Union, 10 in Killarney Union, 8 in Skibbereen Union, and 7 in Tralee Union; of the 31 deaths in Ulster 5 were in Cootehill Union and 10 in Glenties Union; and the 65 deaths in Connaught comprise 6 in Galway Union, 5 in Killala Union, 8 in Roscommon Union, 7 in Sligo Union, and 8 in Swineford Union. It thus appears that the deaths from typhus in the 13 Unions here named form 50 per cent. of the total number for Ireland.

Simple continued and ill-defined Fever.—The number of deaths tabulated under this heading is 100, being 21 over the number for the year 1897, but 84 under the average for the ten years 1888–97: 29 occurred in Leinster, 19 in Munster, 29 in Ulster, and 23 in Connaught.

Enteric Fever.—Deaths from enteric fever, which had risen from 716 in the year 1896 to 998 in the following year, further rose last year to 1,284 or 55 per cent. in excess of the average for the ten years 1888–97, and much higher than the number in any of these years. More than one-half of the 1,284 deaths occurred in the Union of Belfast, where there were 649 fatal cases of the disease—a number equal to a rate of 1·8 per 1,000 of the estimated population, and 182, or 14 per cent. of the total, were in one or other of the two Unions of Dublin North and Dublin South, the rate represented thereby, being 0·5 per 1,000 living. The following comprise all the other Unions in which 10 or more deaths from enteric fever were registered during the year:—Antrim, 12 deaths; Ballymena, 19; Cork, 25; Kilmallock, 11; Lisburn, 20; Lurgan, 15; Newtownards, 10; and Rathdown 11. From the foregoing it appears that the deaths in 11 of the 159 Unions amounted to 954, or about three-fourths of the total. The remaining 330 deaths were distributed over 112 Unions, and in 36 of the Unions no deaths from the disease were registered. The total number for the province of Leinster is 277, or 23·3 per 100,000 of the population according to the Census of 1891; for Munster, 144, or 12·3 per 100,000; for Ulster, 825, or 50·9 per 100,000; and for Connaught, 38, or 5·2 per 100,000. More than one-half—694 of the 1,284 deaths—occurred among persons aged 15 years and under 35.

Whooping-cough.—While not so heavy as in the preceding year, the mortality from whooping-cough was above the average, the deaths amounting to 1,588, or 34·9 per 100,000 of the population at all ages, being 286, or 22 per cent., over the average for the ten years 1888–97, and higher than the number for any of those years except

TABLE XI.—Showing for the year 1898 the Deaths from the several forms of Fever at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

1897, when the disease caused 1,851 deaths. In 5 of the 159 Unions the whooping-cough death rate reached 1 per 1,000 of the population according to the Census of 1891: these Unions are:—Belmullet, (19 deaths) 1·3 per 1,000; Cahersiveen (24 deaths), 1·0 per 1,000; Coleraine (34 deaths), 1·0 per 1,000; Dingle (33 deaths), 1·7 per 1,000; and Listowel (45 deaths), 1·2 per 1,000. Among Unions in which, although the rate did not reach 1 per 1,000, the deaths from the disease were comparatively numerous may be mentioned—Belfast, 115 deaths; Dublin North, 72 deaths; Dublin South, 74; Enniscorthy, 26; Inishowen, 22; Kanturk, 23 (equal to 0·9 per 1,000 living); Killarney, 39 or 0·96 per 1,000); Kilrush, 22; Limerick, 36; Londonderry, 59 (or 0·98 per 1,000; Magherafelt, 20; New Ross, 24; Swineford, 27; Tralee, 39 (or 0·9 per 1,000); Westport, 25; and Wexford 25. The respective rates per 100,000 of the (1891) population for the four provinces are:—Leinster, 34·3; Munster, 40·8; Ulster, 30·9; and Connaught, 27·9.

Diphtheria caused 373 deaths against 339 for the preceding year, and an average of 348 for the ten years 1888–97. Ten or more deaths from the disease occurred in each of seven Unions, and the fatal cases in these Unions constitute more than one-half of the number from the whole of Ireland. These Unions are Ballymena, with 10 deaths; Belfast, 91 deaths (equal to 0·3 per 1,000 of the estimated population); Cork, 11; Dublin North, 29; Dublin South, 31; Kinsale, 11 (or 0·6 per 1,000); and Omagh, 11. In 80 of the 159 Unions no deaths from diphtheria were recorded. The respective numbers of deaths for the provinces are:—Leinster, 100; Munster, 57; Ulster, 193; and Connaught, 23.

Erysipelas.—There has been a gradual decline in the deaths from erysipelas during the last few years: the number for last year is 122, only, or 18 under that for the preceding year, and 85 below the average for the ten years 1888–97.

Puerperal Fever.—The mortality from this cause, also, has declined in recent years the deaths having fallen gradually from 454 for the year 1894 to 179 for last year. The average number for the ten years 1888–97 was 301.

Influenza and its complications caused 2,277 deaths, or 5 per 10,000 of the population, being 742 over the number for the preceding year, 886, or 64 per cent., in excess of the average for the ten years 1888–97, and, with one exception (3,742 in 1892), the highest number registered during any year since the establishment of registration in 1864. From that year, up to and including the year 1889, the highest annual number of deaths from influenza was 311, while in one year the fatal cases fell to 21. In 1890, however, there were 1,712 deaths, and for the seven years 1890–6 the average number was 1,759, the extremes of the yearly numbers for that period being 3,742 in 1892 and 729 in 1896. The respective rates for the provinces last year were:—Leinster, 7·9 per 10,000 of the population according to the Census of 1891; Munster, 3·6 per 10,000; Ulster, 3·7; and Connaught, 4·5. The highest county rate was 12·5 per 10,000 for Carlow; and the lowest, 1·7 per 10,000, the rate for Donegal, and Londonderry. Fifty-one per cent. of the total occurred among persons aged 55 years and upwards.

The Table (XII.) on the opposite page shows the distribution of the deaths from influenza through the several counties.

TABLE XII.—Showing, by Provinces and Counties, the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the year 1898, with the rate per 10,000 of the population* represented by the deaths at all ages.

* See Note on page 3. † Including part of the County of the Town of Drogheda.

Simple Cholera.—There are 194 deaths tabulated under this heading—54 occurred in Leinster, 49 in Munster, 87 (including 61 in Belfast Union) in Ulster, and 4 in Connaught.

Diarrhœa and Dysentery caused 1,824 deaths, being 30 per cent. above the average for the ten years 1888–97, and higher than the number for any of these years except 1893, when 1,967 deaths were tabulated under this heading. The 1,824 deaths represent an annual rate of 40·1 per 100,000 of the population, the respective rates for the four provinces being :—Leinster, 46·1 ; Munster, 34·4 ; Ulster, 49·5 ; and Connaught, 9·9. Of the 548 deaths in Leinster, 334, or 61 per cent., occurred in the Dublin Registration Area, and of the 801 deaths in Ulster, 434, or 54 per cent., were in Belfast ; the rate per 1,000 of the population in Dublin being 1·0, in Belfast about 1·2, and in the whole of Ireland, less these two civic centres, 0·3.

The deaths of 4 males were caused by *Hydrophobia* : 2 occurred in the province of Munster, one in Ulster, and one in Connaught.

II.—Parasitic Diseases.

There were only 50 deaths from diseases of this class : the number is 3 over that for the preceding year, and 3 under that for the year 1896.

III.—Dietetic Diseases.

The number of deaths from dietetic diseases is 177, including 174 from intemperance, 51 of which (45 males and 6 females) were caused by delirium tremens, and 123 (96 males and 27 females) come under the head of chronic alcoholism. The number of deaths from intemperance registered in the year 1897 was 166, and in the preceding year 156.

IV.—Constitutional Diseases.

The diseases classified as "constitutional" caused 16,594 deaths (7,929 males and 8,665 females), affording a rate of 1 in every 5 of all the deaths, and equal to 365 in every 100,000 of the population.

Phthisis or Pulmonary Consumption.—Allowing for decrease of population, the mortality from phthisis in 1898 shows scarcely any appreciable variation from the average for the preceding ten years. The number of deaths is 9,678 (4,572 males and 5,106 females), or 213·0 in every 100,000 of the estimated population ; the average for the preceding ten years was 9,809, or 211·0 per 100,000, the annual rates for that period varying from 198·5 in 1896 to 216·6 in 1892 ; the rate for 1897 was 214·2.

As heretofore, Leinster and Ulster yield the highest rates, and Connaught the lowest. The rates for the four provinces are as follow :—Leinster, 231 per 100,000 of the population ; Ulster, 217 ; Munster, 195 ; and Connaught, 156.

Of the 3,512 deaths from phthisis in Ulster, 1,096 occurred in the Registrars' Districts into which the City of Belfast extends, this number being equal to 313 per 100,000 of the estimated population ; and the 2,743 fatal cases of the disease in Leinster comprise 1,217, or 348 per 100,000 of the population, registered in the Dublin Registration Area.

Of the total number of deaths from phthisis in Ireland, 7,303, or 75 per cent., were of persons aged 15 and under 45 years of age.

Tabes Mesenterica caused 1,073 deaths, and *Tubercular Meningitis* 1,210, and 1,018 deaths come under the head of *Miscellaneous forms of Tuberculosis, Scrofula.*

Tuberculosis.—The deaths from phthisis and those recorded under the three headings last referred to, comprise nearly all the deaths from tuberculosis, and it may be seen that, taken together, they amount to 12,979, which number is equal to 15·8 per cent. of the deaths from all causes registered in Ireland during the year, and represents a mortality equivalent to 2·9 per 1,000 of the population.

In view of the special interest attaching to the subject at the present time, and having regard to the fact that the statistics show that this high death rate is not much over the average rate yielded by the mortality from these causes in Ireland during a long series of years, I have had the following Table (Table XIII.), constructed. It shows the deaths from each chief form of tubercular disease during the year 1898, and each of the 27 years preceding, with the ratio of these deaths to the deaths from all causes and to the population. Decennial averages and averages for the 27 years 1871–97 are also included. The average rate per 1,000 of the estimated population for the whole of this latter period was 2·7 per 1,000, which was also the average rate for the ten years 1881–90, and the seven years 1891–7. The average for the ten years 1871–80 was slightly less, viz. :—2·6 per 1,000, but as regards this rate it may be observed that it is most probably somewhat under the actual average, as in the absence of the aid derived from the system of Burial Returns introduced in the year 1879, under the Public Health Act of 1878, the registration of deaths was not as full or satisfactory as it has become since that date. Taking the years from 1879 up to the present time, the average rate was 2·7, and it will be seen that the extreme rates were 2·9 and 2·5 per 1,000, the former being the rate for the years 1880, 1897, and 1898, and the latter that for the year 1881.

As regards last year, the deaths in those Registrars' Districts comprising the towns which in either 1881 or 1891 had 10,000 or more inhabitants are distinguished from those in other parts of the country. It will be observed that the tuberculosis death rate in the former group in 1898 was 5·0 per 1,000 inhabitants, and in the latter 2·2 per 1,000, showing that the rate for the town districts referred to was more than double that for the remainder of the country. The death rate for the whole of Ireland was, as before stated, 2·9.

TABLE XIII.—Showing the Number of Deaths from the following causes, viz., Tabes Mesenterica, Tubercular Meningitis, Phthisis, "Miscellaneous Forms of Tuberculosis, Scrofula," and from All Causes, registered in Ireland in each of the twenty-eight years 1871–98, with the Rate per 1,000 of Estimated Population represented by (*a*) Deaths from the above-mentioned forms of Tuberculosis; (*b*) Deaths from all causes; and the per-centage of total Deaths caused by the tubercular diseases referred to, the figures for 1898 distinguishing deaths in the Registrars' Districts comprising Towns which in 1881 or 1891 had 10,000 or more Inhabitants from those in other parts of the country.

Years.	Number of Deaths from				Total Deaths from all the foregoing causes.		Total Deaths from all causes		Per-centage of Deaths caused by the Diseases named in Columns 2, 3, 4, and 5.
	Tabes Mesenterica.	Tubercular Meningitis.	Phthisis.	Miscellaneous Forms of Tuberculosis, Scrofula.	Number.	Rate per 1000 of Estimated Population.	Number.	Rate per 1,000.

Gout.—The number of deaths from gout is 21 (11 males and 10 females); it shows a decrease of 5 as compared with the number for the preceding year, which was 5 under that for 1896.

Cancer.—Cancer caused 2,657 deaths (1,238 males and 1,419 females), or 58·5 per 100,000 living, showing an increase equivalent to 40 per cent. as compared with the rate for the first of the preceding ten years, since which year there has been, with one exception (the year 1895), a continuous increase in the mortality from this cause.

The following Table shows, by Sexes and Age-periods, the deaths from Cancer registered during the year 1898, arranged according to the part of the body affected by the disease; also the number of deaths to 100,000 of the living at same age. It will be observed from the Table that the deaths entered under the first eleven headings therein, which relate to various parts of the head, neck, and throat, amount to 543, and that of these, 382, or more than two-thirds, were deaths of males. 641 of the classified cases were deaths from cancer of the stomach; 254 females died from cancer of the breast, and 196 females from cancer of the uterus. The Table shows also the total deaths from cancer in each of the ten years 1888-97, arranged by Age-periods.

* Including 11 Ventricles, 7 Pelvis, 5 Prostate, &c.

V.—Developmental Diseases.

The number of deaths in this class is 18,459, of which 17,777 (8,200 males and 9,577 females), or 21·6 per cent. of the deaths from all causes, were ascribed to "old age." Of the remaining 682 deaths, 563 are tabulated under the head of "premature birth"; 31 were caused by atelectasis, 10 by cyanosis, 43 by spina bifida; &c.

VI.—Local Diseases.

The deaths from "local diseases" amount to 30,925 (15,679 males and 15,246 females), or 37·5 per cent. of the deaths from all causes.

Diseases of the Nervous System.—From diseases in this group there resulted 6,194 deaths—3,239 males and 2,955 females. They include 2,117 from convulsions (nearly all children), 1,098 tabulated under the head of "hemiplegia, brain paralysis"; 263 from paraplegia and diseases of the spinal cord; 1,227 from apoplexy; 364 from inflammation of the brain or its membranes; 276 from epilepsy; 400 tabulated under the heading "insanity, general paralysis of the insane"; 14 (4 males and 10 females) from chorea or St. Vitus's dance; 133 from softening of the brain, &c.

Diseases of the Circulatory System.—Diseases of the circulatory system caused 6,230 deaths—3,063 males and 3,167 females.

*Diseases of the Respiratory System.**—Not as low as in the year 1896, the mortality from diseases of the respiratory system* was somewhat less than in 1897, and was not only much below the average for the ten years 1888–97, but was, both absolutely and in proportion to the population, lower than in any of these years except 1896. The number of deaths from these causes was 12,099—6,207 males and 5,892 females—or 266·3 in every 100,000 of the population; in the preceding year there were 12,857 deaths from these causes registered (equal to 282·5 per 100,000 living), and the average number for the ten years 1888–97 was 14,121, or 303·3 per 100,000 living. In 1896 the number fell to 11,236, or 246·4 per 100,000. The respective rates for the Provinces, in 1898, are—Leinster, 303 per 100,000 persons; Munster, 234; Ulster, 281; and Connaught, 166.

Of the 12,099 deaths last year, 7,352 (3,437 males and 3,915 females) were from bronchitis; 3,550 (2,074 males and 1,476 females) from pneumonia or inflammation of the lungs; 418 from croup; 214 from asthma and emphysema; 171 from pleurisy; 130 from laryngitis; &c.

Diseases of the Digestive System.—The number of deaths from these diseases is 3,814 (1,890 males and 1,924 females), including 395 from enteritis or inflammation of the bowels; 404 from peritonitis or inflammation of the covering of the bowels; 376 tabulated under the heading of "ileus, obstruction of intestine"; 127 from hernia; 7 (4 males and 3 females) from fistula; 261—160 males and 101 females—from cirrhosis of liver; &c.

Diseases of the Urinary System.—To the various affections of this order of diseases 1,573 deaths (1,036 males and 537 females) were ascribed. Of these deaths, 609 (355 males and 254 females) were from Bright's disease; 336 from acute nephritis or inflammation of the kidneys; 10 from suppression of urine; 27 from stone in the bladder; 50 from uræmia, &c.

The remaining deaths from Local Diseases comprise 63 from *Diseases of the Lymphatic System and of Ductless Glands*; 518 from *Diseases of the Reproductive System* (including 137 from diseases of the Organs of Generation and 381 from the Accidents of Childbirth); 212 from *Diseases of the Organs of Locomotion;* and 167 from *Diseases of the Integumentary System.* The deaths from the Accidents of Childbirth and those from Puerperal Fever combined are equal to one death for every 188 births registered; the corresponding average ratio for the preceding ten years was one death to 144 births.

VII.—Violent Deaths.

The number of violent deaths registered during the year is 1,993 (1,348 males and 645 females), or 43·9 in every 100,000 of the population, being somewhat higher than the average rate for the ten years 1888–97. Accidents or negligence caused 1,779 of these deaths (including 410 from burns or scalds and 349 from drowning), against an average of 1,708; the number of cases of homicide (murder and manslaughter) was 67, or 9 below the average; and the number of suicides 145, against an average of 128. Two males were executed.

Inquests.—There were 2,812 inquests reported to the Registrars during the year 1898, being 1 inquest to every 29 deaths registered.

AGES.

Deaths of infants under 1 year old numbered 11,611, being equal to 11·0 per cent. of the number of births registered. The corresponding average per-centage for the preceding ten years was 10·0.

* Exclusive of Phthisis or Pulmonary Consumption, for which see "Constitutional Diseases."

Amongst children under 5 years of age 17,923 deaths occurred—a mortality equal to 39·5 in every 1,000 of the estimated number of the living at that age. Of these, 9,662 were boys and 8,261 girls; the former number representing 41·9 in every 1,000 boys and the latter 37·0 in every 1,000 girls under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 9·6 per cent. of the estimated number of the living at that age.

Among the deaths registered are 803 of persons stated to have been aged 95 years or upwards—375 males and 428 females; of these 189 (80 males and 109 females) were returned as having been 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable; but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found, in almost every instance, that, so far as the Registrars could ascertain, the age was correctly stated.

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland) who left Ireland during the year 1898 was 32,241; of these 14,030 were males and 18,211 were females. Of the whole number, 3,340 were from the Province of Leinster; 13,013 from Munster; 5,577 from Ulster; and 10,311 from Connaught.

Of the total emigrants from Ireland in 1898, 7·4 per cent. were under 15 years of age; 82·3 per cent. were between 15 and 35 years old; and 10·3 per cent. were 35 or upwards.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf (1st quality, delivered) in Dublin in the year 1898 was 6¼*d.*, being ½*d.* over the average price for the previous year.* Oatmeal (1st quality) averaged 15*s.* 3*d.* per cwt. in Dublin: the average price for 1897 was 13*s.* 6*d.*; the average prices of potatoes in Dublin ranged from 3*s.* to 4*s.* 3*d.* per cwt., against 2*s.* 5*d.* to 3*s.* 9*d.* in 1897; and those of beef from 44*s.* 6*d.* to 53*s.* per cwt., against 44*s.* 6*d.* to 57*s.* in 1897.

Table XV.—Average Prices in Dublin of Bread, Oatmeal, Potatoes, and Beef, during the years 1888–98, and the Average Number of Persons in Ireland receiving In-Door and Out-Door Relief on Saturdays in those years; also the Average Prices of Provisions and the Average Number of Persons in Receipt of Relief during each quarter of the year 1898.

* Prices for the first two quarters of 1888 were derived from Returns furnished by Messrs. Manders & Co.; those for the third and fourth quarters of 1888 and for the years 1889–98 from Returns received from "Bolands, Limited," and Messrs. Johnston & Co. (or Johnston, Mooney, and O'Brien, Limited)—the prices quoted for these two firms including delivery.

† Compiled from Returns furnished by the Local Government Board.

Surveying the period covered by several Tables in this Report, *i.e.*, 1898, and the ten years preceding, it is found that beef was lowest in the year 1896, when the average prices ranged from 43*s.* 6*d.*, to 54*s.* per cwt., and 1898, when they ranged from 44*s.* 6*d.* to 53*s.*; bread, oatmeal, and potatoes were cheapest in 1896, in which year the average price of bread (1st quality, delivered) was 5*d.* per 4lb. loaf; the average price of oatmeal (1st quality) 12*s.* 7*d.* per cwt.; and the average range of prices of potatoes from 1*s.* 11*d.* to 2*s.* 11*d.* per cwt. The highest average price of bread was 6¾*d.* per 4lb. loaf in 1891, and of oatmeal 15*s.* 5*d.* per cwt. in 1891 and 1892; the highest range for potatoes, 3*s.* 6*d.* to 4*s.* 2*d.* per cwt. in 1891, and for beef, 50*s.* 6*d.* to 62*s.* per cwt. in 1890.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1898 was 44,186, being 1,337 over the average for the preceding year; and that the average number of persons receiving out-door relief was 66,612, or 11,916 over the corresponding number for 1897.

THE WEATHER.

The following particulars and those given on pages 23–43, which are inserted by the kind permission of the Editor of the "Dublin Journal of Medical Science," have been derived from Returns of Meteorological Observations taken in Dublin City by J. W. Moore, Esq., M.D., F.R.C.P.I., F.R.MET. SOC.; and published in the Journal during the years 1898–99. The Tables on pages 44–46, also, are founded on Dr. Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·005 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1898 was 29·949 inches. The highest observed reading was 30·589 inches at 9 A.M. on January 23rd. The lowest observed reading was 28·761 inches, at 9 A.M. on November 25th. The extreme range of atmospherical pressure was 1·828 inches compared with 1·914 inches in 1897.

The *Mean Temperature* of the air for the year was 51·6°. The highest reading was 77·8° on September 6th; the lowest reading was 28·1° on February 24th. The average mean temperature for the years 1878–97, was 48·8°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 50·8°.

Rain fell on 194 days, including snow or sleet on 16 days and hail on 23 days. The average annual number of rainy days in the years 1878–97 was 196·0. The total rainfall measured 27·048 inches compared with an average of 27·503 inches in the twenty years 1878–97. During the first half of 1898 (January to June, inclusive) the rainfall was 12·115 inches on 98 days; during the second half (July to December, inclusive) 14·933 inches fell on 96 days.

As regards the *Direction of the Wind*, 730 observations were made during the year, with this result—N., 40; N.E., 45; E., 56; S.E., 57; S., 65; S.W., 124; W., 219; N.W., 97; Calms, 27.

I have the honour to be

Your Excellency's faithful servant,

THOS. W. GRIMSHAW,

Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
Dublin, 15*th December*, 1899.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1898.

By J. W. MOORE, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.

(Extracted from the *Dublin Journal of Medical Science.*)

January, 1898, establishes a record for high temperature—the mean was above the average all over North-western and Western Europe, including France and Northern Germany. In Dublin it was 47·8°, or 1·2° above the value for the warm January of 1875. An anticyclone over Central Europe, with depressions over the Norwegian Sea and Northern Europe, caused S.W. winds off the Atlantic and the high temperature of the month. There was at the same time a deficient rainfall, which is unusual.

In Dublin the arithmetical mean temperature (47·8°) was much above the average (41·4°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 47·4°—a record warmth for January. In the thirty-three years ending with 1897, January was coldest in 1881 (M. T. = 33·2°), and warmest in 1875 (M. T. = 46·6°). In 1897 the M. T. was 38·1°. As a general rule, January in Dublin is not colder, but a shade warmer, than December. This is owing to the full development in January of a winter area of low pressure over the Atlantic, to the north-westward of the British Isles, and to a resulting prevalence of S.W. winds in their vicinity. January, 1898, proved no exception to this rule, the M. T. being 2·9° above that of December, 1897 (44·9°).

The mean height of the barometer was 30·202 inches, or 0·328 inch above the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·589 inches at 9 a.m. of the 23rd, and fell to 29·334 inches at 9 a.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1·255 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 47·4°, or 10·1° above the value for January, 1897. Using the formula, *Mean Temp.* = *Min.* + (*max.* — *min.* × ·52), the M. T. becomes 47·9°, compared with a twenty-five years' average of 41·5°. The arithmetical mean of the maximal and minimal readings was 47·8°, compared with a twenty-five years' average of 41·4°. On the 30th the thermometer in the screen rose to 60·8°—wind, S.W.; on the 1st the temperature fell to 31·9°—wind, W. The minimum on the grass was 30·0°, also on the 1st.

The rainfall was 1·786 inches, distributed over 14 days. The average rainfall for January in the twenty-five years, 1865-89, inclusive, was 2·200 inches, and the average number of rainy days was 17·3. The rainfall, therefore, and also the rainy days were below the average. The record rainfall for January was in 1895—namely, 5·711 inches on 24 days. In 1876, only ·406 inch was measured on but 9 days; and in 1880 the rainfall was only ·563 inch on but 8 days. In 1897, 2·694 inches fell on 17 days.

The atmosphere was foggy on the 1st, 2nd, 3rd, 5th, 13th, 14th, 15th, and 20th. High winds were noted on 8 days, reaching the force of a gale on 4 days—the 18th, 19th, 29th, and 30th. There was no snow, sleet, or hail. Temperature exceeded 50° in the screen on 21 days; while it fell to or below 32° in the screen on only one night, compared with 13 nights in 1897, only 3 in 1896, 18 in 1895, 7 in 1894, 4 in 1893, 15 in 1892, 7 in 1891, 1 night in 1890, and 3 nights in 1889. The minima on the grass were 32°, or less, on only 3 nights, compared with 21 nights in 1897, 8 nights in 1896. 29 in 1895, 17 in 1894, 16 in 1893, 25 in 1892, 21 in 1891, 15 in 1890, and 16 in 1889. Solar halos were seen on the 1st and 2nd; lunar halos on the 1st, 3rd, 9th, and 31st.

New Year's Day, 1898, broke calm, foggy, and frosty. A solar halo was seen at 1 p.m. Dense. wet fog formed at 4 p.m. During the week ended Saturday, the 8th, there was a spell of open, but rainy and generally changeable, weather. The prevalent trend of the atmospheric currents across North-western Europe was from S.W. to N.W., but no very large or deep depressions were observed, and so there were no gales of any magnitude. Even on the Continent there was but little frost, and what did occur was intermittent only. In the South of Russia and in Hungary, however, freezing weather of some intensity was reported within the limits of an anticyclone which had held its position over those regions with considerable steadiness since December 27. On Sunday a shallow depression off the S. of Ireland caused a heavy rainfall in this country and in Wales. On Monday evening a dense wet fog hung over Dublin for a time. A red sunrise on Tuesday morning ushered in a new depression, which brought a still heavier downpour to the Irish and Welsh stations. By Wednesday morning the area of precipitation had extended to England. A brief spell of finer and very warm weather was followed by a renewed rainfall on Thursday afternoon. Friday was at first brilliant, then cloudy. A partial eclipse of the moon was seen at night. Saturday proved changeable, with rain in the afternoon and evening. In Dublin the mean height of the barometer was 29·892 inches, pressure ranging between 29·620 inches at 9 a.m. of Sunday (wind, E.) and 30·167 inches on Monday afternoon (wind, calm). The corrected mean temperature was 46·4°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 45·7°. On Wednesday and again on Thursday the sheltered thermometers rose to 54·7°, having fallen to 37·9° on Sunday. The rainfall was 1·107 inches on six days, ·498 inch being measured on Sunday. South-westerly winds prevailed.

The weather remained very mild during the week ended Saturday, the 15th, the remarkable point being that both the barometer and the thermometer ranged high. Also it is unusual for fine weather and high temperatures to go hand and hand in winter. The period was rainless at many stations in Great Britain and in the East of Ireland. On Sunday morning cyclonic systems of no

great depth were found off the North of Scotland and the North of Spain, while anticyclonic systems existed to the westward of Ireland and over the Baltic and Germany. Fine, quiet weather prevailed. Throughout the remainder of the week a large anticyclone stretched east and west across Central Europe, while depressions passed north-eastwards or eastwards across the extreme North of Europe. At first the British Islands lay well to the north of the centre of highest pressure, and so fresh S.W. to W. winds blew generally. On Friday the home countries came more under the influence of the anticyclonic calm area, so that the weather improved, becoming cooler and finer. Saturday was a pleasant, sunny day. In Dublin the mean height of the barometer was 30·356 inches, pressure ranging from 29·980 inches at 9 a.m. of Sunday (wind, W.S.W.) to 30·554 inches at 9 p.m. of Saturday (wind, S.S.W.). The corrected mean temperature was 46·0°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 45·6°. On Wednesday the screened thermometers rose to 53·6°; on Monday they fell to 36·9°. A very perfect lunar halo appeared on Sunday evening. The prevalent wind was again S.W. There was no rainfall in or near Dublin.

The open weather so characteristic of the present winter held throughout the week ended Saturday, the 22nd. Fine at the beginning and close, it was rainy and stormy during the middle of the period; but temperature was persistently above average, sometimes remarkably so. All through the week an anticyclone, in which the barometer stood as high as 30·60 inches, lay over Central Europe, where calm, foggy, and very cold weather prevailed. Thus at Munich the 8 a.m. thermometer readings were 23°, 18°, 18°, 15°, 16°, 18°, and 33° respectively. Meanwhile the barometer was low over the Norwegian Sea and Lapland—in the latter country it fell below 28·80 inches on Wednesday (to 28·76 inches at 8 a.m. at Haparanda). Strong S.W. to W. winds or gales swept over the British Isles and Scandinavia on this day, accompanied by only moderate rainfalls, but by strangely high temperature. At Wick the thermometer rose to 60° in the shade, 3° above any maximal shade temperature recorded at that station in January since 1871, the previous highest reading being 57° in January, 1889. By 6 p.m. the thermometer had fallen 21° at Wick—namely, to 39°. On Saturday morning a small depression passed eastward across Scotland, and in its rear a brisk fall of temperature took place, extending to Ireland and England later in the day. In Dublin the mean height of the barometer was 30·265 inches, pressure falling from 30·475 inches at 9 a.m. of Sunday (wind, S.E.) to 30·001 inches at 9 a.m. of Wednesday (wind, W.S.W.), and rising again to a maximum of 30·564 inches at 9 p.m. of Saturday (wind, N.E.). The corrected mean temperature was 50·6°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 50·1°. On Sunday the screened thermometers fell to 36·8°; on Wednesday they rose to 57·7°. The rainfall was ·338 inch on four days, ·180 inch being measured on Wednesday. The prevailing wind was S.W.

Another week—ended Saturday, the 29th—of singularly mild, fine weather has to be recorded. In Dublin the corrected mean temperatures of the past four weeks have been 46·4°, 46·0°, 50·6°, and 48·8°—all of which values are far above the average for January. As in previous weeks, the distribution of atmospheric pressure has been anticyclonic (high and steady) over the southern half of the British Islands and Central Europe, cyclonic (low and unstable) in Northern Europe and to a less extent in the Mediterranean Basin also. Ireland lay constantly in the track of the S.W. winds of the N.W. quadrant of the anticyclone, and so the weather was throughout mild in this country. On Sunday morning, and to a less extent on Friday and Saturday, comparatively low temperatures occurred in England—in fact, frost was registered on Sunday morning, when the thermometer fell to 29° at York and Loughborough, and to 30° at Cambridge. At this last station a minimum of 28° was recorded on Saturday. On Wednesday and Thursday a vast and deep depression passed eastwards across Lapland—at 8 a.m. of Thursday the barometer was down to 28·50 inches at Haparanda, on the Gulf of Bothnia, whereas it stood 2 inches higher (30·50 inches) at Lyons. At the time mentioned the thermometer read 31° at Haparanda but only −6° at Hermanstadt in Transylvania, 20 degrees of latitude further south. On Saturday a new depression in the far N.W. and N. caused the wind to freshen to a gale from S.W. in Ireland, with a moderate rainfall. In Dublin the mean height of the barometer was 30·419 inches, pressure varying from 30·589 inches at 9 a.m. of Sunday (wind, S.), to 30·239 inches at 9 p.m. of Saturday (wind, W.S.W.). The corrected mean temperature was 48·8°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 48·3°. On Friday the screened thermometers fell to 40·8°; on Saturday they rose to 56·0°. Rain fell on Saturday to the amount of ·034 inch only. S.W. winds again predominated.

The mild weather of the month culminated on Sunday, the 30th, the mean temperature of which was 56·9°, while the extremes were—highest, 60·8°; lowest, 52·9°. The 31st was changeable—at first fair and colder, then milder, squally, and rainy.

In Dublin the rainfall up to January 31st, 1898, amounted to 1·786 inches on 14 days, compared with 2·694 inches on 17 days in 1897, only ·720 inch on 14 days in 1896, and with a twenty-five years' average (1865–1889) of 2·200 inches on 17·3 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 2·345 inches on 13 days, compared with 3·660 inches on 20 days in 1897, only ·485 inch on 7 days in 1896, and 6·190 inches on 19 days in 1895. The heaviest falls in 24 hours were 1·030 inches on the 2nd, and ·530 inch on the 1st.

At Cloneevin, Killiney, Co. Dublin, the rainfall was 1·580 inches on 13 days, ·620 inch being measured on the 2nd. The average fall in January for the 12 years, 1885–1896, was 2·235 inches on 16·5 days. In 1894, the rainfall was 3·260 inches on 23 days; in 1895, 5·930 inches on 24 days; in 1896, ·700 inch on 9 days; and in 1897, 3·080 inches on 20 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell on 9 days in January, the total measurement being 2·316 inches. On the 2nd, 1·001 inches were registered; on the 1st, ·486 inch; and on the 4th, ·368 inch. At this climatological station the thermometer in the screen did not sink to 32° on any night. The highest temperature in the shade was 58·8°, on the 30th; the lowest was 34·0°, on the 10th.

FEBRUARY.—Of average mean temperature, this month was no less than 5° colder than January. It was a rainy month, for there were only ten days on which there was no registrable rainfall; but the downpours were not heavy, except on the 17th, when more than half an inch was recorded. The prevailing winds were W. and N.W., and the force of the wind was often considerable. On the whole, the month was a fairly average February.

In Dublin the mean temperature (42·9°) was 0·1° above the average (42·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 41·3°. In the thirty-three years ending with 1897, February was coldest in 1895 (M. T. = 34·2°), and warmest in 1869 (M. T. = 46·7°). In 1897 the M. T. was as high as 46·0°.

The mean height of the barometer was 29·926 inches, or 0·071 inch above the average value for February—namely, 29·855 inches. The mercury rose to 30·289 inches at 9 p.m. of the 11th, and fell to 29·070 inches at 7 15 a.m. of the 21st. The observed range of atmospheric pressure was, therefore, 1·219 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 41·3°, or 6·1° below the value for January, 1898. Using the formula, *Mean Temp.* = *Min.* + (*max.* — *min.* × ·50), the M. T. is 42·9°, compared with a twenty-five (1865–1889) years' average of 42·8°. On the 1st the thermometer in the screen rose to 59·0°—wind, S.W.; on the 24th the temperature fell to 28·1°—wind, W. The minimum on the grass was 27·0°, on the 23rd —wind, N.W.

The rainfall was 1·743 inches, distributed over 18 days. The average rainfall for February in the twenty-five years, 1865–89, inclusive, was 2·150 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was below, while the rainy days were above the average. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879, also, 3·706 inches fell on 23 days. On the other hand, in 1891 only ·042 inch was measured on but 2 days. The rainfall in 1891 was much the smallest recorded in February for very many years. The record is probably unparalleled in Dublin—·042 inch on 2 days.

The atmosphere was foggy on 3 days—the 17th, 23rd, and 24th. The amount of cloud—50·4 per cent.—was much below the average—66 per cent. High winds were noted on 18 days and reached the force of a gale on the 1st, 2nd, 4th, 12th, and 15th. A solar halo was seen on the 5th; lunar halos were seen on the 4th and 6th.

The temperature reached or exceeded 50° in the screen on 11 days, and it fell below 32° on 7 nights, compared with as many as 18 nights in 1895, and only 1 night in 1896. The minima on the grass were 32°, or less, on 10 nights, compared with every night in 1895, 10 nights in 1896, and 4 nights in 1897. The thermometer once failed—on the 21st—to rise to 40° in the screen.

The weather fell into a very changeable state during the period ended Saturday, the 5th. At 8 a.m. of Sunday, January 30, the barometer ranged from 30·80 inches at Lyons to 28·85 inches at Bodö, in the N.W. of Norway. Hence strong S.W. or W. winds or gales were prevalent and temperature was extremely high. The reduction of atmospheric pressure in the N. culminated on Wednesday morning, when the barometer was down to 28·57 inches in the Shetlands. Strong W. to N.W. gales were felt on the British and Irish coasts. With the veering of the wind to N.W., temperature gave way briskly. The depressions also began to travel south-eastwards across Scandinavia and the North Sea, so that by the end of the week winter seemed fully established over North-Western Europe. On Friday snow and sleet fell in Great Britain, and at night there was sharp frost in many places. A very perfect lunar halo was seen on Friday evening. In Dublin the barometer ranged between 30·128 inches at 9 a.m. of Tuesday (wind, S.W.), and 29·461 inches at 9 a.m. of Friday (wind, N.W.). On Tuesday the screened thermometers rose to 59·0°; on Saturday they fell to 31·1°. The rainfall was ·408 inch on five days, ·213 inch being measured on Thursday. The prevailing winds were W. and N.W. Sleet and hail fell on Wednesday, the 2nd.

While changeable, the weather of the week ended Saturday, the 12th, was in most respects favourable. The first two days were cold, with strong W.N.W. winds and showers of sleety rain and hail at times. At this time the centre of a depression of some depth (29·20 inches) lay between Scotland and Norway, drawing strong, cold N.W. winds in from the Atlantic. The next three days were chiefly fine and mild, with S.W. winds on Wednesday and Thursday. On the night of the last-named day, a fresh gale from the south-westward was felt in the N.W. of Ireland and also in the E. of Scotland. The wind was gusty on nearly all coasts. There was not much rain, except at Belmullet in Mayo and Stornoway in the Hebrides. In Ireland the wind veered temporarily to W.N.W. on Friday, and a beautiful day was enjoyed. At night a fresh backing of the wind to S.W. in Ireland ushered in a new S.W. system, with squalls and a good deal of cloud. Saturday was a dry, searching, squally day. Rain fell in the evening. For the first time this winter severe and continuous cold held in Sweden and Lapland. At Haparanda, on the Gulf of Bothnia, the 8 a.m. temperatures were − 13°, −8°, −24°, −22°, −28°, −11°, and + 8° respectively. In Dublin the mean height of the barometer was 30·042 inches, pressure varying from 29·762 inches at 9 a.m. of Sunday (wind, W. by N.), to 30·289 inches at 9 p.m. of Friday (wind, W.). The mean temperature was 45·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 43·2°. The screened thermometers fell to 35·9° on Monday, and rose to 53·7 on Thursday. Rain fell on three days to the amount of ·206 inch, ·089 inch being measured on Sunday. The prevailing winds were W.N.W. and S.W.

Changeable, but seasonable, weather prevailed during the week ended Saturday, the 19th. An area of high barometer (anticyclone) was generally found lying over the Bay of Biscay, France, and the Peninsula; while (as in past weeks) cyclonic conditions ruled in the British Islands and Scandinavia. Hence came a prevalence of strong and squally westerly winds, with open, showery, or at times rainy weather. At 8 a.m. of Wednesday the barometer read only 28·75 inches at Christiansund, on the west coast of Norway, but stood as high as 30·53 inches at Lyons. Strong westerly gales were felt on Tuesday afternoon over Scotland and the North of Ireland, and these

were followed by equally strong north-westerly gales on Wednesday forenoon. As the deep depression referred to travelled away to the eastward, the weather improved and the wind moderated. On Thursday afternoon, however, the distribution of pressure became complex, owing to the formation of secondary depressions over the British area. One of these caused an easterly breeze and heavy rainfall in the Dublin district on Thursday night and Friday forenoon. The weather then cleared temporarily, and became cold, only to fall into an unsettled state once more on Saturday afternoon and during the ensuing night. In Dublin the mean height of the barometer was 30·038 inches, pressure varying between 30·267 inches at 9 p.m. of Wednesday (wind, W. by N.) and 29·610 inches at 9 p.m. of Saturday (wind, W.N.W.). The mean temperature was 44·7°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 44·0°. On Tuesday the screened thermometers rose to 55·8°.; on Saturday they fell to 32·0°. The rainfall was ·717 inch on four days, ·576 inch being measured on Thursday. Westerly winds again predominated.

The week ended Saturday, the 26th, was the coldest week of the present winter. In Dublin frost occurred under cover (in the thermometer screen) on five nights, and on the grass nightly. The cold weather of the earlier part of the period was brought about by the passage southwards across Western Europe of a deep atmospheric depression between Sunday and Thursday. At 8 a.m. of Sunday the centre of this system was a little to the eastward of the Shetland Isles, and the barometer read only 28·76 inches at Sumburgh Head. All that day the barometer fell in England and Ireland as the system moved southwards, and cold W. winds, with showers of of hail, sleet, and snow became general. By 8 a.m. of Monday the centre had reached St. George's Channel. The depression had begun to fill up, for the lowest pressure was now 29 inches (at Roche's Point, Cork). The centre lay over Brittany on Tuesday morning, had reached Bordeaux on Wednesday morning, and the Riviera on Tuesday morning. Up to this time very cold weather held in the British Isles, the snowstorm on Monday and Tuesday being particularly severe over the S.W. of England. On Friday a new depression edged in from the Atlantic, moving northeastwards and spreading eastwards. It caused high temperature for a short time, followed by heavy rain. This was in turn succeeded by clear and cold weather. In Dublin the mean height of the barometer was 29·738 inches, the observed range being from 29·070 inches at 7·15 a.m. of Monday (wind, E.) to 30·171 inches at 9 a.m. of Thursday (wind, W.). The mean temperature was 38·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 35·9°. On Thursday the screened thermometers sank to 28·1°; on Friday they rose 51·0°. Rain fell on five days to the amount of ·334 inch, ·204 inch being measured on Friday. The prevailing wind was N.W. Snow or hail fell on each of the first three days.

The last two days were changeable and rather cold, with westerly winds.

In Dublin the rainfall up to February 28th, 1898, amounted to 3·529 inches on 32 days, compared with 4·089 inches on 33 days in 1897, only 1·588 inches on 24 days in 1896, 6·336 inches on 33 days in 1895, ·714 inch on 16 days in 1891, and a twenty-five years' (1865–1889) average of 4·350 inches on 34·5 days.

At Knockdolian, Greystones, Co. Wicklow, 1·635 inches of rain fell in February on 16 days. The heaviest fall in 24 hours was ·425 inch on the 17th. The total fall to February 28th inclusive was 3·980 inches on 29 days, compared with 5·190 inches on 37 days in 1897, and only 1·940 inches on but 17 days in 1896.

The rainfall in February at Cloneevin, Killiney, Co. Dublin, amounted to 1·74 inches on 16 days. The average rainfall for February during 12 years (1885-96) at this station is 1·461 inches on 12·5 days. The greatest rainfall in 24 hours was ·58 inch on the 17th. Snow fell on the 20th and 21st. Since January 1, the rainfall was 3·32 inches on 29 days, compared with 4·31 inches on 38 days, in 1897, and 1·64 inches on 19 days in 1896.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell on 18 days in February, the total measurement being 1·607 inches. The corresponding figures for February, 1897, were 1·718 inches on 15 days. On the 25th, ·332 inch was registered. At this climatological station the lowest temperature in the screen was 27·0° on the 21st; the highest was 57·0° on the 1st. Since January 1 the rainfall has been 3·923 inches on 27 days.

MARCH.—March proved the coldest month of the winter of 1897–98. Nevertheless, its mean temperature was only fractionally below the average—0·4°. This result was brought about by the occurrence of a warm spell from the 15th to the 19th, inclusive. After the 23rd very cold weather held to the end of the month, a bitter N.E. gale blowing on the 24th and 25th. Snow or sleet fell in Dublin on 9 days, hail on 8 days.

In Dublin the arithmetical mean temperature (42·7°) was somewhat below the average (43·1°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 41·4°. In the thirty-two years ending with 1897, March was coldest in 1867 and 1883 (M.T. = 39·0°), and warmest in 1893 (M. T. = 48·1°) and in 1868 (M. T.=47·3°).

The mean height of the barometer was 29·969 inches, or 0·053 inch above the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·339 inches at 9 a.m. of the 25th, and fell to 29·428 inches at 9 p.m. of the 29th. The observed range of atmospheric pressure was, therefore, ·0911 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 41·4°. Using the formula, *Mean Temp.* = *Min.* + (*max.—min.* × ·485), the M. T. becomes 42·5°. The arithmetical mean of the maximal and minimal readings was 42·7°, compared with a twenty-five years' average of 43·1°. On the 18th the thermometer in the screen rose to 59·3°—wind, W.S.W.; on the 5th the temperature fell to 30·8°—wind, W.S.W. The minimum on the grass was 28·5°, also on the 5th.

The rainfall was 1·041 inches, distributed over 16 days. The average rainfall for March in the twenty-five years, 1865–89, inclusive, was 2·061 inches, and the average number of rainy days

was 16·5. The rainfall, therefore, and also the rainy days, were below the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days. On the other hand, the smallest March rainfall was ·288 inch on 8 days in 1893.

The atmosphere was more or less foggy in the city on 5 days—viz., the 7th, 8th, 11th, 30th, and 31st. High winds were noted on 11 days, reaching the force of a gale on two occasions—the 24th and 25th. Snow or sleet occurred on the 1st, 2nd, 5th, 7th, 24th, 25th, 26th, 27th, and 28th; and hail fell on the 1st, 4th, 7th, 24th, 25th, 26th, 27th, and 28th. The temperature exceeded 50° in the screen on 9 days, compared with 14 days in 1897, 21 in 1896, 13 in 1895, 22 in 1894, 26 in 1893, only 7 in 1892, 9 in 1891, and 19 in 1890. It fell to or below 32° in the screen on five occasions. The minima on the grass were 32°, or less, on 15 nights, compared with 9 nights in 1897, 8 in 1896, 10 in 1895, 12 each in 1894 and 1893, 25 in 1892, 20 in 1891, and 16 in 1890. The thermometer never rose to 60° in the screen, and never failed to each 40°. A solar halo was seen on the 22nd. Lunar halos appeared on the 1st and 3rd. There was a brilliant aurora borealis on the evening of the 15th.

A continuance of cold and winterly weather signalised the period ended Saturday, the 5th. Prior to Thursday a depression of some depth travelled gradually south-eastwards to Central Europe from the Norwegian Sea. It brought to the British Isles fresh to strong westerly and afterwards northerly winds and cold showers. Hail, sleet, and snow became prevalent on and after Tuesday, the 1st, and thunder and lightning were reported from various stations—from Holyhead on Wednesday, and Scilly and Prawle Point on Thursday. In the course of the last-named day a secondary depression formed over the S.W. of England, and subsequently travelled southwards to the S.W. of France. This system caused falls of cold rain and wet snow in the S. England and parts of France—the heaviest downpour being in London (·35 inch). On Thursday and Friday the eastern quadrant of an anticyclone spread over Ireland from the Atlantic, and northerly winds and cold weather prevailed. On Saturday the barometer fell steadily as a new depression approached from the N.W. This system caused a shift of wind to S.W. and S., clouds and a fall of wet snow in the afternoon. In Dublin the barometer fell to 29·658 inches at 9 p.m. of Saturday (wind, W.) after having risen to 30·061 inches at 9 p.m. of Friday (wind, N.) On Wednesday the screened thermometers rose to 46·6°, on Saturday they fell to 30·8°. The rainfall was ·164 inch on four days, ·094 inch being measured on Tuesday. Hail fell on Tuesday and Friday, snow or sleet on Tuesday, Wednesday, and Saturday.

The cold weather drew to a close in Ireland on Thursday, the 10th, and the last three days of the week ended Saturday, the 12th, were comparatively genial. In England, however, sharp night frosts were felt at the inland stations almost to the end of the week—a minimum of 23° in the shade being recorded at Loughborough on Friday morning. On Sunday a depression passed southwards across Ireland, where cold showers were prevalent. Sleet and soft hail fell on Monday morning, but the day finally proved brilliant, although the air was very keen. At 8 a.m. of Tuesday the barometer stood as high as 31·14 inches at Moscow. A band of high atmospheric pressure now moved southwards across the British Islands, so that quiet, calm, cold weather prevailed. As the ridge of high pressure passed by, westerly winds sprang up, accompanied by cloudy skies and a much higher temperature. This change first affected the North of Ireland and Scotland, and later on extended to the South of Ireland and parts of England. On Saturday there were a few light showers. In Dublin the mean height of the barometer was 30·129 inches, pressure ranging between 29·653 inches at 9 a.m. of Sunday (wind, W.N.W.) and 30·305 inches at 9 a.m. of Thursday (wind, N.W.) The corrected mean temperature was 42·0°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 40·7°. The screened thermometers fell to 31·1° on Tuesday, and rose to 53·5° on Friday. Rain fell in measurable amount on two days, the total fall being ·044 inch, of which ·033 inch was registered on Sunday. North-westerly winds predominated.

The westerly type of weather held throughout the week ended Saturday, the 19th, which was much milder and also duller than its immediate predecessors. The barometer ruled low to the northward of Scotland, while it was relatively high over the Bay of Biscay, France, and the southern parts of the British Isles. On Sunday night a subsidiary depression passed eastwards across Ireland. On Tuesday morning another and deeper depression arrived off the Hebrides, causing squally weather and some rainfall. On the evening of this day brilliant aurora borealis was seen in the British Islands and Denmark. The next three days were cloudy, mild, and squally—the wind being S.W. or W. in direction. Very little rain fell except in the far North. Finally, on Friday night a V-shaped or angular depression caused broken weather for the time being. Saturday was much cooler and fine throughout—the upper clounds still travelling from W.S.W., while the lower clouds and wind came from N. In Dublin the mean height of the barometer was 29·926 inches, pressure ranging between 29·705 inches at 9 a.m. of Friday (wind, W.S.W.), and 30·121 inches at 9 p.m. of Saturday (wind, N.). The corrected mean temperature was 48·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 47·4°. On Friday the screened thermometers rose to 59·3°, having fallen to 35·7° on Sunday. The rainfall was ·180 inch on three days, ·156 inch being measured on Friday. The prevailing wind was W.S.W. The aurora borealis on Tuesday evening was a very splendid display.

Cold throughout the week ended Saturday, the 26th, the weather became extremely severe and inclement on Wednesday, and so continued to the end of the period. During the first three days an anticyclone lay over the British Islands, the weather was fine and quiet, and the diurnal range of temperature was very large, sharp night frosts being followed by spells of warm sunshine by day. At Cambridge the thermometer rose to 51° in the shade on Sunday, and to 54° on Monday, the night minima being 25° and 26° respectively. On Tuesday the barometer fell in Scotland and Ireland, and the wind shifted to S.W., as a depression advanced to our neighbourhood from the northward. By 8 a.m. of Wednesday the centre of this system had reached the Wash, whence it travelled to Central Europe, growing deeper as it moved. Simultaneously the barometer rose quickly in the N., N.W., and W., with the result that baric gradients became very steep for

northerly and north-easterly winds. Strong gales and blinding showers of hail, sleet and snow were reported during the last three days of the week from all exposed points on the British coasts, the S.E. of England suffering most severely. Ireland for the most part escaped the blizzard, but the east coast from Dublin southwards felt the fury of the gale, and was swept by snow and hail squalls from time to time. A fresh decrease of pressure began on Friday, continuing to the end of the week. In Dublin the mean atmospheric pressure was 30·169 inches, the barometer ranging between 30·339 inches at 9 a.m. of Friday (wind, N.E.) and 29·823 inches at 9 p.m. of Saturday (wind also N.E.) The corrected mean temperature was 41·5°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 41·0°. On Wednesday the screened thermometers rose to 52·8°; on Monday they fell to 31·9°. The prevailing winds were N.W. and N.E. The rainfall was ·132 inch on three days, ·101 inch being measured on Saturday. The precipitation was chiefly in the form of snow, sleet, and hail.

Although still cold for the time of year, the weather moderated in the closing period of the month (27th–31st). On Sunday, the 27th, a large and rather deep depression still lay over France and Germany, while an anticyclone was found covering the Gulf of Bothnia. At 8 a.m. the barometer was as low as 29·30 inches in France, whereas it stood at 30·61 inches at Hernosand in Sweden. Strong N.E. winds, dull, cold weather, and rain, hail, and sleet were prevalent in most parts of the British Islands. The west and south of Ireland, however, enjoyed fine weather. Late on Tuesday night, cold rain, sleet, and hail fell heavily in Dublin. Gradients became much less steep after Sunday, so that the N.E. winds died down—on Tuesday, indeed, there was a light S.W. breeze for a time. Rain continued to fall in and near Dublin until the afternoon of the 30th, when a dry spell set in. The rainfall was ·521 inch. The barometer ranged from 29·428 inches at 9 p.m. of Tuesday, the 29th (wind, W.), to 29·916 inches at 9 p.m. of Thursday, the 31st (wind calm). The extremes of temperature both occurred on the latter day—the maximum being 47·6°, the minimum 34·1°. North-easterly winds prevailed.

The rainfall in Dublin during the three months ending March 31st amounted to 4·570 inches on 48 days, compared with 7·069 inches on 57 days in 1897, 4·898 inches on 47 days in 1896, 9·084 inches on 52 days in 1895, 6·028 inches on 53 days in 1894, 5·196 inches on 49 days in 1893, 4·808 inches on 48 days in 1892, only 1·650 inches on but 32 days in 1891, 7·470 inches on 45 days in 1890, and a twenty-five years' average of 6·411 inches on 51·0 days (1865–1889, inclusive).

At Knockdolian, Greystones, Co. Wicklow, only ·765 inch of rain fell on 12 days during March; and the total rainfall since January 1, 1898, equals 4·745 inches on 41 days. The corresponding figures for 1897 are 3·755 inches on 24 days, the total rainfall since January 1 having been 8·945 inches on 61 days. The maximal fall in 24 hours was ·180 inch on the 26th.

The rainfall in March at Cloneevin, Killiney, Co. Dublin, was 1·29 inches on 15 days, compared with 3·28 inches on 23 days in 1897, 2·61 inches on 23 days in 1896, 3·29 inches on 21 days in 1895, 1·11 inches on 14 days in 1894, ·26 inch on 9 days in 1893, ·98 inch on 10 days in 1892, and a twelve years' (1885–96) average of 1·873 inches on 15·2 days. The maximum in the 12 years was 3·59 inches in 1888; the minimum was ·26 inch in 1893. At this station the total rainfall since January 1 was 4·61 inches on 44 days, compared with a fall of 7·59 inches on 61 days in the first quarter of 1897. On the 28th, ·23 inch fell.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in March was ·844 inch on 13 days, compared with 4·490 inches on 23 days in 1897, ·148 inch being registered on the 6th. The highest shade temperature at this climatological station was 59·0°, on the 18th; the lowest was 31·2°, on the 9th. Since January 1, 4·767 inches of rain had fallen at the hospital on 40 days, compared with 10·086 inches on 57 days in the first quarter of 1897.

April.—A mild, genial, spring month, very favourable to vegetation. The heavy rains which fell on the 11th, 23rd, and 30th, made up 75 per cent. of the total precipitation of the month—2·003 inches out of 2·666 inches. A remarkable and sudden increase of temperature occurred between the 5th and 6th. At the close many forest trees were in full leaf.

In Dublin the arithmetical mean temperature (49·7°) was 2·0° above the average (47·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 48·7°. In the thirty-three years ending with 1897, April was coldest in 1879 (the cold year) (M. T.=44·5°), and warmest in 1893 (M. T.=51·4°). The month of April, 1893, was the warmest for at least 30 years.

The mean height of the barometer was 29·828 inches, or 0·022 inch below the average value for April—namely, 29·850 inches. The mercury rose to 30·197 inches at 9 p.m. of the 24th, and fell to 29·220 inches at 3 p.m. of the 30th. The observed range of atmospheric pressure was, therefore, not quite one inch—namely, ·977 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 48·7°, or 7·3° above the value for March, 1898. Using the formula, *Mean Temp.* $= Min. + (max. - min. \times \cdot 476)$, the value is 49·4°, or 2·0° above the average mean temperature for April, calculated in the same way, in the twenty-five years, 1865–89, inclusive (47·4°). The arithmetical mean of the maximal and minimal readings was 49·7°, compared with a twenty-five years' (1865–1889 inclusive) average of 47·7°. On the 7th the thermometer in the screen rose to 64·7°—wind, S.S.W.; on the 5th the temperature fell to 33·4°—wind, S.S.E. The minimum on the grass was 29·7°, also on the 5th.

The rainfall was 2·666 inches, distributed over 16 days. The average rainfall for April in the twenty-five years, 1865–89, inclusive, was 2·055 inches, and the average number of rainy days was 15·2. The rainfall and the rainy days, therefore, were above the average. In 1877 the rainfall in April was very large—4·707 inches on 21 days; in 1882 also, 3·526 inches fell on 20 days, and in 1894, 3·123 inches on 20 days. On the other hand, in 1873, only ·498 inch was measured on 8 days; in 1870, only ·838 inch fell, also on 8 days; and in 1896, only ·883 inch on 16 days.

Fog was observed on the 5th, 18th, 22nd, 24th, and 25th. High winds were noted on 8 days, reaching the force of a gale on the 10th and 30th. Hail fell on the 10th. The temperature rose to or above 60° in the screen on 6 days. It only once failed to reach 50°(on the 30th). It never fell to 32° in the screen, and on only 2 nights did it fall below 32° on the grass. The mean lowest temperature on the grass was 40·2°, compared with 37·7° in 1897, 40·6° in 1896, 37·8° in 1895, 40·0° in 1894, 38·2° in 1893, 32·4° in 1892, 34·1° in 1891 and 1890, 34·4° in 1889, 34·6° in 1888, and 31·6° in 1887. Solar halos were seen on the 7th, 8th, 9th, and 25th, a lunar halo on the 1st.

The month opened with very favourable weather. The nights were sharp, but the thermometer rose in the shade to 53·6 on Friday, the 1st, and to 52·7° on Saturday, the 2nd. On the last-named day a new depression was approaching the N.W. of Ireland from the Atlantic.

The most remarkable feature in the weather of the week ended Saturday, the 9th, was the sudden bound into summer from winter, which occurred on Wednesday, the 6th. At the beginning fresh westerly winds were blowing, accompanied by showers. At 8 a.m. of Monday, a deep V-shaped subsidiary depression lay off the S.W. coast of Norway, and northerly winds were blowing over the British Islands. The sky was clear and the air was keen, although hot sunshine prevailed. Sleet fell in Scotland, hail showers in the North of England. An area of high atmospheric pressure passed eastward across Ireland and England in the rear of the above-mentioned depression, with the result that a decided "chill" occurred in these countries on Monday night, the thermometer falling in the shade to 28° at Parsonstown, 33° in Dublin, 32° in London, 27° at Oxford, 25° at Cambridge, and 24° at Loughborough. The wind now shifted to S.S.E. in Ireland and a sudden rise of temperature took place, so that on Wednesday the thermometer reached 63·1° in the screen in Dublin—the highest since September 28th, 1897. On Thursday the maximum was 64·7°, and on Friday, it was 63·0°. A depression on the night of the last-named day was followed by showers, westerly winds, and a lower temperature on Saturday. Solar halos were seen on each of the last three days. The mean height of barometer was 29·904 inches, pressure varying from 30·125 inches at 9 a.m. of Tuesday (wind, S.S.E.) to 29·606 inches at 7.15 a.m. of Saturday (wind, W.). The corrected mean temperature was 51·0°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 50·3°. The screened thermometers fell to 33·4° on Tuesday, and rose to 64·7° on Thursday. The air was particularly dry on Good Friday. Rain fell on three days to the amount of ·103 inch, ·073 inch being measured on Saturday.

The weather of the week ended Saturday, the 16th, was of a distinctly changeable and unsettled type, but in the main favourable to both health and vegetation. Easter Day was very unsettled. Strong, squally S.W. winds and heavy showers of rain and hail prevailed in Ireland and parts of Great Britain, thunder and lightning being reported from Valencia Island and from Dublin, thunder only from York, and lightning from Yarmouth. These electrical disturbances were connected with a subsidiary depression which reached Denmark on Monday morning. Another subsidiary appeared off the South of Ireland at noon of Easter Monday, thence travelling eastward across England. It caused very wet, dull weather—·97 inch of rain being measured at York, ·76 inch at Liverpool, ·85 inch at Roche's Point, ·48 inch at Loughborough, and ·44 inch in Dublin. On Tuesday night a large primary depression passed northwards over the West of Ireland, giving a rainfall of one inch to Valentia and of half an inch to Parsonstown. The weather now became fair and bright, though at times showery, in Ireland, while a V-shaped depression passing across England produced wet weather in England on Thursday. On Friday heavy showers of rain and hail fell to the S.E. of Dublin, but the weather remained very fine and dry in the city itself. Thunder and lightning occurred at Roche's Point, Cork, and in central England in the course of the day. Saturday also was most favourable. In Dublin the mean atmospheric pressure was 29·724 inches, the barometer falling to 29·364 inches at 2.30 p.m. of Sunday (wind, W.S.W.) and rising to 30·002 inches, at 9 a.m. of Saturday (wind, W.). The corrected mean temperature was 49·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 48·2°. On Sunday the shade thermometers registered 60·6°, on Tuesday they fell to 37·8°. The rainfall was ·666 inch on four days, ·439 inch being registered on Monday. The prevailing winds were westerly (S.W. to N.W.).

Changeable, but generally favourable, weather prevailed during the week ended Saturday, the 23rd. Curious troughs of relatively low atmospheric pressure advanced eastwards across Ireland on the nights of Sunday and Tuesday. But these V-shaped depressions filled up or dispersed when they reached Great Britain, after causing heavy rains in most parts of Ireland. The east coast near Dublin, however, received only moderate showers, which hastened spring vegetation in a wonderful way. The modification observed in the low pressure systems seemed to be caused by the persistent presence of an anticyclone over the extreme North of Europe, where also winter lingered—at Haparanda, on the Gulf of Bothnia, the night minima were 0°, 10°, 7°, 20°, 12°, 18°, and 10°, respectively—sufficiently low temperatures for the second half of April. The diurnal range of temperature at inland stations even in the British Isles was at times large—on Thursday night the thermometer fell to 43° at Parsonstown, and 30° at Cambridge from maxima of 67° and 60° respectively. In Dublin the mean height of the barometer was 29·932 inches, pressure ranging from 29·591 inches at 9 a.m. of Monday (wind, S.S.E.) to 30·185 inches at 9 a.m. of Thursday (wind, N.N.W.). The corrected mean temperature was 50·2°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 49·2°. On Wednesday the screened thermometers rose to 60·6°, on Friday they fell to 41·5°. Rain fell on five days to the amount of ·787 inch, ·093 inch being measured on Monday and as much as ·608 inch on Saturday. The wind was variable and light except on Sunday night and Monday forenoon, when it blew freshly from S.S.E.

In the week ended the 30th favourable but not settled weather prevailed until Saturday, when there was a violent rainstorm. On and after Tuesday rain fell copiously in Great Britain, and on Saturday there was a heavy downpour in Ireland. Throughout the period an anticyclone was found over Scandinavia. On Monday and Tuesday this high pressure system spread south-westwards across the British Isles, and fine but cool and somewhat foggy or cloudy weather

prevailed. Throughout the greater part of Monday a well-defined solar halo was visible. On Tuesday morning a large though shallow area of low atmospheric pressure appeared over the Bay of Biscay and Central France. This system moved northwards to the South of England, growing deeper as it advanced. It led to a thunderstorm in Kent and to plentiful rainfalls in the S. and E. of England, and later on in Scotland also. On Friday morning a still larger and deeper depression appeared off the S.W. of Ireland, in which country rain began to fall. Saturday was very inclement, and a severe rainstorm occurred in the Dublin district, ·929 inch falling between 9 a.m. and 4 p.m. The wind was first E.S.E., then N.E., N., and finally W. on that day. In Dublin the mean height of the barometer was 29·736 inches, pressure rising to 30·197 inches at 9 p.m. of Sunday (wind, calm) and falling to 29·220 inches about 3 p.m. of Saturday (wind, W.). The corrected mean temperature was 48·5°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 47·9°. On Monday the screened thermometers fell to 38·7°, on Thursday they rose to 57·7°. Rain fell on three days to the amount of 1·099 inches, ·956 inch being measured on Saturday. E. and S.E. winds prevailed.

The rainfall in Dublin during the four months ending April 30th amounted to 7·236 inches on 64 days, compared with 9·554 inches on 79 days, in 1897, 5·781 inches on 63 days in 1896, 10·233 inches on 65 days in 1895, 9·151 inches on 73 days in 1894, 6·242 inches on 56 days in 1893, 5·922 inches on 61 days in 1892, only 3·203 inches on 46 days in 1891, and a twenty-five years' average of 8·466 inches on 66·2 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall amounted to 4·145 inches on 15 days. The heaviest falls in 24 hours were ·760 inch on the 30th, and ·660 inch on the 11th. The total rainfall in 1898, up to April 30th, was 8·890 inches on 56 days, compared with 13·080 inches on 80 days in 1897, 5·686 inches on 50 days in 1896, 12·570 inches on 54 days in 1895, 12·456 inches on 70 days in 1894, and 8·530 inches on 54 days in 1893.

At Cloneevin, Killiney, Co. Dublin, 3·13 inches of rain fell on 17 days. The maximal fall in 24 hours was 1·04 inches on the 30th. The average rainfall in April of the twelve years, 1885–96, was 1·648 inches on 13·2 days. Since January 1, 1898, 7·74 inches of rain fell at this station on 61 days, compared with 10·36 inches on 83 days, in 1897, 5·27 inches on 55 days in 1896, 11·28 inches on 66 days in 1895, 9·09 inches on 74 days in 1894, and 6·94 inches on 57 days in 1893.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 4·441 inches on 15 days, compared with 3·406 inches on 19 days in April, 1897. On the 11th, ·592 inch was measured; on the 23rd, ·620 inch; and on the 30th, 1·270 inches. The maximal temperature in the shade was 61·0° on the 7th. The minimal temperature in the screen was 32·8° on the 5th. At this climatological station, 9·208 inches of rain fell on 55 days up to April 30th, 1898, compared with 13·492 inches on 76 days in the first four months of 1897.

MAY.—Like May, 1897, in the matter of temperature, May, 1898, proved very unlike that month in the matter of cloud, rainfall, and rainy days. It may be described as a cloudy, rainy, or showery, cold month. In May, 1897, the rainfall amounted to only 56 per cent. of the average; in May, 1898, it was 164 per cent. There was a remarkable preponderance of winds from polar points of the compass.

In Dublin the arithmetical mean temperature (51·2°) was decidedly below the average (52·0°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 50·6°. In the thirty-three years ending with 1897, May was coldest in 1869 (M. T. = 48·2°), and warmest in 1893 (M. T. = 56·7°). In 1896 the M. T. was 55·2°; and in 1897, 50·9°.

The mean height of the barometer was 29·854 inches, or 0·135 inch below the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·316 inches at 9 p.m. of the 6th, and fell to 29·106 inches at 9 a.m. of the 3rd. The observed range of atmospheric pressure was, therefore, 1·210 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 50·6°, or 1·9° above the value for April, 1898, 48·7°). Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·47), the value was 50·8°, or 0·8° below the average mean temperature for May, calculated in the same way, in the twenty-five years, 1865–89, inclusive (51·6°). The arithmetical mean of the maximal and minimal readings was 51·2°, compared with a twenty-five years' average of 52·0°. On the 8th the thermometer in the screen rose to 63·7°—wind, W. It reached the same height on the 25th—wind, N.E. On the 16th the temperature fell to 36·0°—wind, W. The minimum on the grass was 33·0°, also on the 16th.

The rainfall amounted to 3·332 inches, distributed over 20 days. The average rainfall for May in the twenty-five years, 1865–89, inclusive, was 2·030 inches, and the average number of rainy days was 15·4. The rainfall and the rainy days were thus much above the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also, 5·414 inches fell on 19 days. On the other hand, in 1895, only ·177 inch was measured on but 3 days. In 1896 the fall was only ·190 inch on 7 days. In 1897 1·139 inches fell on 14 days.

A lunar halo was seen on the 4th; solar halos appeared on the 8th and 11th. High winds were noted on 9 days, but did not attain the force of a gale on any occasion. The atmosphere was slightly foggy on the 7th. Hail fell on the 12th, 13th, 16th, 17th, and 31st. Thunder and lightning occurred on the evening of the 23rd.

During the month the thermometer did not fall below 32° in the screen or on the grass. The mean minimal temperature on the grass was 42·9°, compared with 40·9° in 1897; 43·1° in 1896, 41·8° in 1895, 37·6° in 1894, 45·6° in 1893, 41·3° in 1892, 37·7° in 1891, 42·2° in 1890, 42·4° in 1889, 37·5° in 1888, and 37·9° in 1887. The maximum exceeded 60° on 8 days, but fell short of 50° on one day—the 2nd.

Very changeable weather prevailed during the greater part of the week ended Saturday, the 7th. Thursday and Friday, however, were very fine in Dublin. On Sunday heavy showers fell between 11 a.m. and 4 p.m. A still heavier downpour of rain occurred on Monday afternoon when a deep

depression passed slowly northwards across Ireland. This system attained its greatest intensity on Tuesday morning. At 8 a.m. the barometer was down to 29·03 inches at Valentia and 29·04 inches at Parsonstown. On Wednesday the centre of this depression was found off the W. of Scotland, whence a V-shaped trough of low pressure stretched south-eastwards across Great Britain to the Straits of Dover. The weather now improved in Ireland but became rainy in England, particularly on Thursday, when a secondary depression passed eastwards from the S. of Ireland across England to Holland. On Friday a ridge of high pressure appeared over Ireland, but the barometer soon gave way again, though slowly, and a further copious downpour of rain occurred on Saturday afternoon. Mention should be made of a destructive thunder and hail storm which visited Plymouth on Monday forenoon. In Dublin the mean height of the barometer was 29·724 inches, pressure ranging from 29·106 inches at 9 a.m. of Tuesday (wind, S.S.E.) to 30·316 inches at 9 p.m. of Friday (wind, S.E.). The corrected mean temperature was 49·6°. The mean dry-bulb temperature at 9 a.m. and 9 p.m. was 50·1°. The screened thermometers fell to 40·0° on Friday, and rose to 60·7° on Saturday. Rain fell on five days to the amount of 1·408 inches, ·669 inch being measured on Monday and ·516 inch on Saturday. The prevalent wind was S.S.E.

The week ended Saturday, the 14th, was another period of changeable, showery weather. The periodic cold spell of the second week in May was particularly well marked, beginning on Wednesday and lasting to the end of the week. Atmospheric pressure was tolerably high at first, but subsequently depression after depression arrived from the Atlantic, so that the barometer fell fast all over Scandinavia and the British Isles. The climax was reached on Thursday morning, when the barometer read only 28·38 inches at Christiansund in Norway. In the rear of this primary disturbance (which finally passed away to the north-west) various secondary depressions continued to cross the British Islands up to and including Friday. Squalls, with heavy showers of rain and hail, and in some places thunder, were prevalent—the storms of Thursday and Friday being particularly severe. In Dublin the weather was fairly warm until Wednesday, but after that it was more like winter than late spring. On Saturday a sudden change for the better occurred, the wind shifting to N.E. and E., the sky clearing and temperature rising. In Dublin the mean atmospheric pressure was 29·701 inches, and the barometer ranged from 30·111 inches at 9 p.m. of Sunday (wind, W.N.W.) to 29·126 inches at 3.30 p.m. of Wednesday (wind, N.W.). The corrected mean temperature was 49·8°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 49·1°. The screened thermometer rose to 63·7° on Sunday, and fell to 39·3° on Friday. Rain fell on five days to the amount of ·868 inch, the heaviest downpour in 24 hours being ·570 inch on Friday. Westerly to north-westerly and northerly winds prevailed.

The most remarkable feature about the week ended Saturday, the 21st, was the prevalence of broken, dull, cold and rainy weather in France and England, whereas finer, brighter weather ruled in Scotland and throughout the greater part of Ireland. The east coast of this country, however, came in for a good deal of rain and squally N. and N.E. winds. On Sunday morning depressions were found off the North of Scotland and over the English Channel—northerly winds and fair, cold weather prevailed in Ireland. By Tuesday morning another shallow depression had advanced to the North of Ireland and West of Scotland. It caused cold, showery weather. As the day wore on this system dispersed, and an anticyclone began to form over Norway, Scotland, and Ireland. Meanwhile a new and large depression appeared over Italy, whence it moved slowly north-westwards towards England and the Netherlands. As it travelled it caused ever freshening N.E. winds, dull, cold, and very rainy weather. These unsettled conditions did not reach the W. and N.W. of Ireland until Saturday night when rain fell generally in considerable quantities. In Dublin the mean height of the barometer was 30·089 inches, pressure ranging between 30·293 inches at 9 p.m of Wednesday (wind, N.E.) and 29·810 inches at 9 p.m. of Saturday (wind, N.E.). The corrected mean temperature was 49·9°. The mean dry bulb reading was 49·5°. On Monday the screened thermometers sank to 36·0°, on Friday they rose to 63·6°. Rain fell on four days to the amount of ·749 inch, of which ·331 inch was measured on Saturday and ·248 inch on Tuesday. The prevailing winds were at first W., afterwards N.E. Hail showers fell in Dublin on Monday and Tuesday.

Very favourable, yet generally uneventful weather prevailed throughout the week ended Saturday, the 28th. On Sunday, Monday, and Tuesday, however, there were electrical disturbances in many parts of England and Ireland, and on Monday evening thunder and lightning occurred near Dublin, while there was a thunderstorm at Roche's Point, Cork Harbour, on Wednesday evening. These electrical manifestations were connected with a large though shallow depression, which had travelled from Italy to the British Islands during the previous week. From Monday onwards another low pressure system was observed over Denmark and Norway. It caused cool northerly winds and low temperatures, but the rainfall which accompanied it was not as a rule large. During the last three days conditions were distinctly anticyclonic in Ireland, to the westward of which country the barometer ruled high. The amount of cloud was particularly large for May, except on Tuesday afternoon and throughout Wednesday. In Dublin the mean height of the barometer was 29·892 inches, pressure ranging between 29·736 inches at 9 p.m. of Sunday (wind, E.) and 30·182 inches at 9 p.m. of Saturday (wind, N.W.). The corrected mean temperature was 53·2°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 52·7°. On Wednesday the screened thermometers rose to 63·7°, on Friday they fell to 39·9°. The rainfall was ·087 inch on three days, ·070 inch being measured on Monday. Easterly and then northerly winds prevailed.

The last three days were unsettled, cloudy, squally, and showery. There was moderate warmth on Sunday, the 29th, when the shade maximum was 60·7°, but temperature then fell away, and Tuesday, the 31st, was like a March day, hail falling in heavy showers from time to time.

The rainfall in Dublin during the five months ending May 31st amounted to 10·568 inches on 84 days, compared with 10·693 inches on 93 days in 1897, 5·971 inches on 70 days in 1896, 10·410 inches on 68 days in 1895, 12·709 inches on 90 days in 1894, 7·908 inches on 66 days in 1893

10·099 inches on 80 days in 1892, only 5·995 inches on 63 days in 1891, 11·483 inches on 76 days in 1890, and a twenty-five years' average of 10·496 inches on 81·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 3·555 inches, distributed over 22 days, 1·080 inches falling on the 2nd and ·400 inch on the 7th. The total fall since January 1st, 1898, equals 12·445 inches on 78 days, compared with 14·120 inches on 90 days in 1897, 5·716 inches on 52 days in 1896, 12·845 inches on 58 days in 1895, 15·696 inches on 85 days in 1894, and 9·565 inches on 65 days in 1893.

The rainfall at Cloneevin, Killiney, Co. Dublin, was 3·330 inches on 21 days, compared with 0·850 inch on 10 days in May, 1897—0·66 inch falling on the 7th. At this station the average rainfall in May in the twelve years, 1885–1896, was 2·061 inches on 13 days. May, 1896, was a very dry month, only 0·06 inch falling on 2 days. Since January 1, 1898, 11·07 inches of rain have fallen on 82 days at Cloneevin. The corresponding figures in 1897 were 11·21 inches on 93 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in May was 3·251 inches on 19 days, compared with 0·802 inch on 11 days in May, 1897. The maximal fall in 24 hours was 1·119 inches on the 2nd. Since January 1, 12·459 inches of rain have fallen at this station on 74 days. The maximum shade temperature was 64·0° on the 8th, the minimum was 35·2° on the 16th.

JUNE.—June, 1898, may be described as an average month. Atmospheric pressure, air temperature, and rainfall were all about the normal value. Like June, 1897, the month must be regarded as a favourable one, conducive to health and propitious to vegetation. It was, however, eminently changeable, and the fluctuations of temperature were abrupt and considerable.

In Dublin the arithmetical mean temperature (58·8°) was above the average (57·8°) by 0·2°; the mean dry bulb readings at 9 a.m. and 9 p.m. were 57·4°. In the thirty-three years ending with 1897, June was coldest in 1882 (M. T.=55·8°); and in 1879 (the "cold year") (M. T.=55·9°). It was warmest in 1887 (M. T.=62·3°); in 1865 (M. T.=61·0°); and in 1896 (M. T.=61·4°).

The mean height of the barometer was 29·973 inches, or 0·056 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·357 inches at 9 a.m. of the 14th, and fell to 29·330 inches at 7.30 a.m. of the 25th. The observed range of atmospheric pressure was, therefore, 1·027 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 57·4°, or 6·8° above the value for May, 1898. Using the formula, *Mean Temp.=Min.+ (max.—min.* × ·465), the value was 57·5°, or 0·3° above the average mean temperature for June, calculated in the same way, in the twenty-five years, 1865–89, inclusive (57·2°). The arithmetical mean of the maximal and minimal readings was 58·0°, compared with a twenty-five years' average of 57·8°. On the 17th the thermometer in the screen rose to 74·9°—wind, W.; on the 2nd the temperature fell to 41·8°—wind, N. The minimum on the grass was 39·9°, also on the 2nd.

The rainfall amounted to 1·547 inches, distributed over 14 days. The average rainfall for June in the twenty-five years, 1865–89, inclusive, was 1·817 inches, and the average number of rainy days was 13·8. The rainfall, therefore, was below, while the rainy days were equal to the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879, also, 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 inch was measured on 6 days; in 1887, the rainfall was only ·252 inch, distributed over only 5 days. In 1897, 3·257 inches fell on 20 days.

High winds were noted on 8 days, but the force of a gale was on no occasion attained. The atmosphere was more or less foggy on the 8th. Temperature reached or exceeded 70° in the screen on 4 days, compared with 17 days in 1887, only 1 day in 1888, and 6 days in 1897. A thunderstorm occurred on the 12th, and thunder was heard on the 26th. Hail fell on the 1st and 22nd.

Very unsettled, squally, cold, and showery weather characterised the period ending Saturday, the 4th. The showers were accompanied by thunder and lightning at many British stations on Wednesday, the 1st, and Thursday, the 2nd. This last-named day proved unexpectedly fine and sunny in Ireland, a depression which had advanced from the N.W. having "turned tail" and retreated towards N. and N.W. along the coasts of Denmark and Norway. On Friday, however, a new low pressure area appeared to the northward of Ireland, and this brought about a renewal of unsettled weather. The wind at the same time backed towards S.W. and S., so that there was a distinct advance in temperature, and the period closed with a prospect of more summerlike weather. In Dublin the barometer ranged between 29·669 inches, at 9 p.m. of Wednesday, wind, N.W.) and 29·960 inches at 9 p.m. of Thursday (wind, N.W.) On Thursday the screened thermometers fell to 41·8°, on Saturday they rose to 61·8°. The rainfall was ·187 inch on three days, ·124 inch being measured on Saturday. N.W. to S.W. winds prevailed.

Commencing with gloomy, unsettled weather and heavy rains, the week ended Saturday, the 11th, proved fine and summerlike in Ireland and Scotland. In the S.E. of England, however, the weather was kept in an unsettled, dull, and rainy state until Friday by the approach of a shallow depression from the southward on Wednesday. On Sunday morning the barometer was low (29·54 inches at Valentia) off the S.W. of Ireland, southerly winds prevailed, accompanied by rain in many places. On Monday morning a V-shaped depression lay over Ireland, where the weather remained in a broken, rainy condition, while thunder and lightning occurred very generally throughout England. A brisk increase of atmospheric pressure set in as the day advanced, so that by Tuesday morning baric gradients had become very slight over the British Islands, and there were signs of a change to finer and more summerlike conditions. At 8 a.m. of Wednesday a shallow depression was observed over the S.W. and centre of France, moving slowly north-eastwards. This system became stationary over Belgium on Thursday, and caused gloomy wet weather over the English Channel, the S.E. of England, the North of France, Belgium, and Germany. The rainfalls were very heavy in several places, 1·31 inches being registered at the North Foreland on Friday morning and 1·67

inches at Yarmouth. In Ireland beautiful, warm, and summerlike weather was enjoyed on and after Tuesday. In Dublin the mean atmospheric pressure was 30·014 inches, the barometer ranging from 29·555 inches at 9 a.m. of Monday (wind, S.) to 30·242 inches at 9 a.m. of Thursday (wind, calm). The corrected mean temperature was 57·7°. The mean dry-bulb reading at 9 a.m. and 9 p.m. was 57·5°. The screened thermometers fell to 48·1° on Tuesday, and rose to 71·0° on Saturday. Rain fell on two days to the amount of ·549 inch, ·429 inch being measured on Sunday. Southerly and south-easterly winds predominated.

Except on Sunday and Saturday, very fine weather prevailed in Ireland during the week ended Saturday, the 18th. In England it was dull, cold, and generally unseasonable until Thursday. Early on Sunday very electrical clouds were seen over Dublin, and there was much distant thunder between 9 and 10 a.m. The rolling of thunder began again at midday, and at 2 p.m. there was a heavy thunderstorm to the S.W. of the city, accompanied by drenching rain in places. No rain fell to the S.E., in Fitzwilliam-square the measurement was only ·028 inch, at Glasnevin Botanic Gardens ·060 inch, at the Ordnance Survey Office, Phœnix Park, ·200 inch. The evening was cool and fine. During the storm the higher clouds came from S.E. or S.S.E., the lower stratum drove down from N. or N.N.E. A period of cloudy, cool weather followed, and this in turn gave place to bright, quiet, warm, weather, lasting until Friday night. On the day named the thermometer rose to 74·9° in the screen. Saturday was cloudy and blustering, with light showers. The dull, cold weather experienced in England was caused by depressions lying over the South of France, Spain, and Italy, where heavy rains fell. In Dublin the barometer rose to 30·357 inches at 9 a.m. of Tuesday (wind, N.E.) and fell to 30·062 inches at 9 a.m. of Saturday (wind, W.S.W.). Its mean height was 30·251 inches. The corrected mean temperature was 58·6°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 59·6°. The screened thermometers fell to 46·8° on Wednesday and rose to 74·9 on Friday. Rain fell on two days to the amount of ·087 inch, of which ·059 inch was measured on Saturday. Thunder and lightning occurred on Sunday. N.E. and afterwards W. winds prevailed.

Fair and warm at first, the weather during the week ended Saturday, the 25th, gradually became very unsettled, squally, showery, and cold. Only on Sunday and for a short time on Thursday morning was the distribution of atmospheric pressure anticyclonic, and then only in the south. For the rest, progressively deepening depressions passed eastward across the northern part of the Kingdom, and on Saturday morning the barometer was down to 29·28 inches at Nairn, and as low as 29·33 inches even in Dublin. Sunday was a fine, warm day—the maximal temperature in Dublin was 72·3°. On Monday the maximum was 72·6°, there were passing showers and fine intervals. Tuesday was fine but cloudy; towards evening temperature gave way fast. Heavy showers of rain and hail fell on Wednesday. Thursday afternoon proved rainy. Friday was rainy to showery and cold, but with intervals of bright sunshine. Rain fell heavily on Saturday forenoon, when the wind drew round to N. In Dublin the mean height of the barometer was 29·757 inches, pressure ranging between 30·167 inches at 9 a.m. of Sunday (wind, N.W.) and 29·330 inches at 7·30 a.m. of Saturday (wind, W.N.W.). The corrected mean temperature was 58·6°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 57·6°. The screened thermometers rose to 72·6° on Monday and fell to 46·9° on Thursday. Rain fell on five days to the amount of ·659 inch, ·191 inch being measured on Saturday. Westerly winds prevailed.

Generally favourable, yet changeable, was the weather of the closing period of the month—the 26th to the 30th inclusive. At the beginning an atmospheric depression lay exactly over England, where the weather was broken, cold and showery, with hail and thunder in many places. In Ireland northerly winds prevailed, and conditions were more genial. Thunder was heard in Dublin on the evening of Sunday, the 26th. Monday and Tuesday were fine days. On Wednesday shallow depressions, passing eastwards, caused changeable, showery weather. There was, however, a general rise of temperature. Thursday was cloudy, but fine. The extremes of temperature were both recorded on Tuesday—highest, 69·0°; lowest, 46·3°. Rain fell on two days to the amount of ·065 inch, ·051 inch being registered on Wednesday. The barometer rose from 29·647 inches at 9 a.m. of Sunday (wind, N.) to 30·197 inches at 9 p.m. of Thursday (wind, W.N.W.).

The rainfall in Dublin during the six months ending June 30th amounted to 12·115 inches on 98 days, compared with 13·950 inches on 113 days in 1897, 7·854 inches on 84 days in 1896, 12·282 inches on 80 days in 1895, 14·361 inches on 109 days in 1894, 9·624 inches on 78 days in 1893, 11·770 inches on 97 days in 1892, 8·748 inches on 77 days in 1891, 13·413 inches on 94 days in 1890, only 6·741 inches on 67 days in 1887, and a twenty-five years' average of 12·313 inches on 95·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·055 inches, distributed over 10 days. Of this quantity ·345 inch fell on the 24th. The total fall since January 1 has been 13·500 inches on 88 days, compared with 18·125 inches on 106 days in the first six months of 1897, 7·356 inches on 61 days in the same period of 1896, 14,270 inches on 67 days in 1895, 17·381 inches on 96 days in 1894, and 11·776 inches on 75 days in 1893.

The rainfall at Cloneevin, Killiney, Co. Dublin, amounted to 2·03 inches on 15 days. The greatest fall in 24 hours was ·91 inch on the 5th. The average rainfall for June in the 12 years, 1885-1896, was 1·515 inches on 11·7 days. In 1897, 3·59 inches fell on 20 days, in 1896 1·65 inches fell on 13 days. Since January 1, 1898, 13·10 inches of rain have fallen at this station on 97 days, compared with 14·80 inches on 113 days in the corresponding six months of 1897.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 2·459 inches on 14 days, compared with 4·078 inches on 15 days in June, 1897. On the 5th, 1·230 inches were measured, and on the 24th, ·352 inch. The maximum temperature in the shade was 73·0° on the 17th, the minimum temperature in the shade was 41·0° on the 2nd and 3rd. At this climatological station the rainfall for the six months ending June 30, amounted to 14·918 inches on 88 days, compared with 18·372 inches on 102 days in the same period of 1897.

JULY.—Strangely like July, 1897, this month was very fine and dry, with a mean temperature slightly above the average. Of the total scanty rainfall (·945 inch) 61·5 per cent. (·581 inch) fell on the 21st and 22nd. Throughout the month the barometer ruled high over Ireland, where the isobars ran anticyclonically. Over Northern Europe, on the contrary, conditions were cyclonic, and depressions followed each other in rapid succession from W. to E. or N.W. to S.E.

On the 22nd a cyclonic system passed north-eastwards across the South of Ireland, causing the only really broken weather of the month.

In Dublin the arithmetical mean temperature (61·1°) was slightly above the average (60·6°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 60·2°. In the thirty-three years ending with 1897, July was coldest in 1879 ("the cold year") (M.T. = 57·2°) It was warmest in 1887 (M.T. = 63·7°); and in 1868 (the "warm year") (M.T. = 63·5°). In 1897 the M.T. was 61·1°.

The mean height of the barometer was 30·145 inches, or 0·230 inch above the corrected average value for July—namely, 29·915 inches. The mercury marked 30·445 inches at 9 a.m. of the 11th, and fell to 29·661 inches at 3 p.m. of the 22nd. The observed range of atmospheric pressure was, therefore, 0·784 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 60·2°, or 2·8° above the value for June, 1898. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·465), the value was 60·6°, or 0·4° above the average mean temperature for July, calculated in the same way, in the twenty-five years, 1865–89, inclusive (60·2°). The arithmetical mean of the maximal and minimal readings was 61·1°, compared with a twenty-five years' average of 60·6°. These values were identical with those recorded in July, 1897. On the 11th the thermometer in the screen rose to 75·2°—wind, W.; on the 4th the temperature fell to 44·9°—wind, N. The minimum on the grass was 40·8° on the 30th.

The rainfall was only ·945 inch, distributed over 8 days. The average rainfall for July in the twenty-five years, 1865-89, inclusive, was 2·420 inches, and the average number of rainy days was 17·2. The rainfall, therefore, and also the rainy days, were much below the average. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1896, also, 5·474 inches fell on 18 days; and in 1895, 4·503 inches on 16 days. On the other hand, in 1870, only ·539 inch was measured on 8 days; in 1869 the fall was only ·739 inch on 9 days; and in 1868 only ·741 inch fell on but 5 days.

High winds were noted on 9 days, but attained the force of a gale on only one occasion —the 18th. Temperature reached or exceeded 70° in the screen on 7 days. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In 1888, the maximum for July was only 68·7.

Thunder occurred on the 22nd. A solar halo was seen on the 20th. The atmosphere was rather foggy on the 9th and 22nd.

Friday, the 1st, was cool and changeable. A light sea-breeze prevailed until 2 p.m., when rain set in and fell heavily for 4 hours, the measurement being ·250 inch. Saturday, the 2nd, was chiefly fine but not settled.

Very fine and, in the end, brilliant weather was enjoyed during the week ended Saturday, the 9th, throughout which a high atmospheric pressure held off the west or south-west of Ireland. On the other hand, depressions of no great depth crossed Scandinavia in an easterly direction one after another. Northerly winds prevailed in the British Isles and the nights were at first often very sharp for the time of year—39° F. being registered at Wick on Sunday, and at Parsonstown on Monday morning; 42° at Donaghadee, Parsonstown, and Valentia Island on Tuesday morning. Sunday was a beautiful day near Dublin, and in the evening a fine partial eclipse of the moon was well seen in a clear sky. Temperature rose on Tuesday, and fresh W. to N.W. winds blew on that and the following day, accompanied by a great deal of cloud. On Thursday very slight drizzle was observed once or twice, but no measurable rainfall occurred. Friday and Saturday were days of brilliant sunshine and cool easterly sea-breezes in the daytime. Towards evening on Saturday some fog and haze were observed. In Dublin the mean height of the barometer was 30·273 inches, the range of pressure being from 30·037 inches at 9 a.m. of Sunday (wind, N.W.) to 30·365 inches at 9 p.m. of Saturday (wind, E.N.E.). The corrected mean temperature was 58·8°. The mean dry-bulb reading at 9 a.m. and 9 p.m. was 59·1°. On Wednesday and also on Thursday the thermometer rose to 69·8° in the screen, having fallen to 44·9° on Monday. N.W. winds prevailed. There was no measurable rainfall.

The record of the week ended Saturday, the 16th, is again one of fine summerlike weather, with prevalent north-westerly winds. The barometer was usually highest to the west or south of Ireland, and in this country the isobars ran anticyclonically, except on Wednesday, when a rather large depression passed across Scandinavia from N.N.W. to S.S.E. The first two days were very fine, warm, and sunny. On Monday the thermometer rose to 75·2° in the shade in Dublin. A slight shower fell at this station early on Tuesday morning, yielding only ·003 inch in the rain-gauge. The day was cloudy and unsettled-looking, with a fresh W.N.W. wind. Wednesday was cloudy to fair. Some rain fell in the extreme W. and S.W. of Ireland, and also in the E. and S.E. of Great Britain. This slight break in the weather was connected with the presence of a depression over Scandinavia, where rain fell more abundantly than in the British Isles. The last three days of the week were fine with a good deal of cloud at times. On Friday the thermometer rose to 82° in the shade in London. In Dublin the mean height of the barometer was 30·220 inches, pressure ranging from 30·445 inches at 9 a.m. of Monday (wind, N.N.W.) to 30·008 inches at 9 a.m. of Wednesday (wind N.W.). The corrected mean temperature was 62·7°. The mean dry-bulb temperature was 62·4°. On Monday the screened thermometers rose to 75·2°, having fallen to 51·5° on Sunday. N.W. winds prevailed. The rainfall amounted but to a trace—·004 inch, and there was not even one "rainy day."

Although by no means so settled as in the two preceding weeks, the weather during the week ended Saturday, the 23rd, was favourable, and a genial rainfall beautified the country. By Monday morning a trough-shaped depression had advanced over the north of Scotland, and gradients for westerly winds were steep to the southward of the lowest pressure, which was 29·59 inches at Stornoway and Wick, Accordingly strong to squally W. to N.W. winds prevailed, and a moderate gale was felt for a while in and near Dublin. Very little rain fell in connection with this disturbance, which passed quickly on to Scandinavia, becoming much modified in form as it travelled. In its rear an anticyclone of no intensity came in over Ireland, causing quiet and fine but cloudy weather. On Thursday the barometer gave way generally in the west, and by 8 a.m. of Friday a well-marked depression, secondary to a large area of low pressure lying over the Norwegian Sea and Lapland, had arrived off the coast of Kerry. Thence it passed north-eastwards, accompanied by an abundant rainfall and thunder in many places. In its wake the weather cleared and became once more warm and summerlike. In Dublin the mean height of the barometer was 29·959 inches, the range of pressure being from 30·200 inches at 9 a.m. of Sunday (wind, N.W.), to 29·661 inches at 3 p.m of Friday (wind, N.E.). The corrected mean temperature was 62·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 61·4°. On Sunday the screened thermometers rose to 72·8°, on Saturday they fell to 53·7. The rainfall was ·605 inch on five days, ·342 inch being measured on Friday, when thunder was heard. The prevailing winds were at first N.W., then E.S.E.

While the weather was for the most part dry during the week ended Saturday, the 30th, it was cooler and more cloudy than in past weeks. Only on Wednesday and Saturday was anything like summer heat felt in Dublin. The barometer was again highest in Ireland, lowest over Northern Europe. On Sunday morning a depression (with central readings as low as 29·15 inches) stretched from Christiania to Stockholm. Cool and strong N. and N.W. winds prevailed in Great Britain. In Ireland the air was calmer. The next two days were chiefly fine and quiet, but a considerable rainfall occurred on Tuesday in the South of Ireland. On Wednesday evening a veil of cirrus cloud appeared in the W. and N.W., heralding the approach of a depression to the Scottish coasts. This disturbance travelled rapidly down the east coast of Great Britain, reaching Holland on Friday morning. It caused showers and a moderate northerly gale on the Irish coasts, but thunderstorms and heavier rains in many parts of England. On Friday morning the measurements were ·55 inch at Nairn, ·54 at Shields, ·60 inch at the North Foreland, ·56 inch at Cambridge, ·99 inch at Yarmouth, and 1·65 inches at the Helder. On Friday night a remarkable depression of air-temperature occurred, the thermometer sinking in Dublin to 45·8° in the screen and to 40·8° on the grass. Curiously enough a few hours later the maximum of the week—71·1°—was recorded in Dublin. In this city the mean height of the barometer was 30·139 inches, pressure varying from 29·994 inches at 9 a.m. of Thursday (wind, N.W.) to 30·288 inches at 9 a.m. of Friday (wind, N.E.). The corrected mean temperature was 59·2°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 58·6°. Rain fell on Wednesday to the amount of ·034 inch. The prevailing winds were E.S.E. and N.W.

The last two days were chiefly fine, but cloudy. On Sunday afternoon, the 31st, a heavy but very local shower fell over the S.E. of Dublin, yielding ·052 inch of rain in the gauge.

The rainfall in Dublin during the seven months ending July 31st amounted to 13·060 inches on 106 days, compared with 15·600 inches on 125 days in 1897, 13·328 inches on 102 days in 1896, 16·785 inches on 96 days in 1895, 18·133 inches on 130 days in 1894, 11·666 inches on 92 days in 1893, 7·935 inches on 80 days in 1887, and a twenty-five years' average of 14·733 inches on 112·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 1·145 inches on 6 days, compared with 1·625 inches on 10 days in 1897, 5·726 inches on 16 days in 1896, 3·680 inches on 16 days in 1895, 3·805 inches on 19 days in 1894, and 1·290 inches on 15 days in 1893. Of the total rainfall ·350 inch fell on the 1st, and ·445 inch on the 21st. The total fall since January 1 has been 14·645 inches on 94 days, compared with 19·750 inches on 116 days in 1897, 13·082 inches on 77 days in 1896, 17·950 inches on 83 days in 1895, 21·186 inches on 115 days in 1894, and 13·066 inches on 90 days in 1893.

At Cloneevin, Killiney, Co. Dublin, the rainfall in July was ·840 inch on 7 days, compared with a twelve years' average of 2·554 inches on 16·3 days. On the 22nd the rainfall was ·350 inch. In July, 1897, 1·28 inches fell on 10 days; in 1896, 6·72 inches on 20 days; in 1895, 3·58 inches on 17 days; in 1894, 4·08 inches on 23 days; in 1885, only ·70 inch on 9 days. Since January 1, 1898, 13·94 inches of rain have fallen on 104 days at this station.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 1·380 inches on 6 days, compared with 1·425 inches on 11 days in July, 1897, ·480 inch being measured on the 21st, and ·425 inch on the 22nd. At this Second Order Station 16·298 inches of rain have fallen on 94 days since January 1, 1898. The maximal temperature in the shade in July was 76·0° on the 30th, the minimum was 42·8° on the 4th.

August.—Like August, 1897, this was a changeable, showery, windy, but warm month. In the south and south-east of England great heat prevailed in the middle of the month, which was broken and rainy in Ireland. Thunder and lightning of unusual intensity occurred in the S.W. and S. of Ireland on the 18th and 21st. The wind was often high and squally.

In Dublin the arithmetical mean temperature (61·4°) was decidedly above the average (59·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 60·2°. In the thirty-three years ending with 1897, August was coldest in 1881 (M. T.=57·0°), and warmest in 1893 (M. T.=63·0°). In 1897 the M.T. was 60·8°; in 1879 (the "cold year"), it was 57·7°.

The mean height of the barometer was 29·964 inches, or 0·067 inch above the corrected average value for August—namely, 29·897 inches. The mercury marked 30·308 inches at 9 p.m. of the

31st, and fell to 29·531 inches at 6 p.m. of the 5th. The observed range of atmospheric pressure was, therefore, 0·777 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 60·2°. It was exactly equal to the value for July, 1898. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·47), the mean temperature was 61·0°, or 1·7° above the average mean temperature for August, calculated in the same way, in the twenty-five years, 1865–89, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 61·4°, compared with a twenty-five years' average of 59·7°. On the 5th the thermometer in the screen rose to 75·4°—wind, W.S.W.; on the 9th the temperature fell to 47·2°—wind, N.W. The minimum on the grass was 41·8°, also on the 9th.

The rainfall was 3·456 inches, distributed over 18 days. The average rainfall for August in the twenty-five years, 1865–89, inclusive, was 2·825 inches, and the average number of rainy days was 15·5. The rainfall, therefore, and the rainy days were considerably in excess of the average. In 1874 the rainfall in August was very large—4·946 inches on 18 days; in 1868, also, 4·745 inches fell on, however, only 13 days; but the heaviest downpour in August occurred in 1889, when 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. In 1897, 3·788 inches fell on 24 days.

High winds were noted on as many as 12 days, and attained the force of a gale on four occasions in Dublin—the 2nd, 5th, 28th and 30th. Thunder occurred on the 21st, lightning on the 7th, 15th, and 21st. Temperature reached 70° in the screen on 9 days. Solar halos were seen on the 7th and 9th. The atmosphere was foggy on the 19th, 20th, 21st and 26th.

During the period ended Saturday, the 6th, the weather was much less settled in Ireland than it had been for several weeks past. Strong and squally westerly winds prevailed and rain fell abundantly on Wednesday, Thursday, and Friday. On the morning of the last-named day the wind blew a gale, and on Tuesday also the wind reached gale force at times. On and after Monday, the 1st, there was a general reduction of atmospheric pressure over north-western Europe, and gradients for westerly (between S.W. and N.W.) winds remained steep until Saturday, the 6th. Accordingly the weather was unsettled and blustering, particularly on Friday, when gales prevailed both in the Irish Sea and in St. George's and the English Channels. Great warmth accompanied the gale of Friday, and as the air was damp at the same time, the weather was oppressive. In Dublin the therometer rose to 75·4° during the gale. Large quantities of rain fell in Ireland and the North of England on Wednesday and the two following days. On Friday morning a cyclonic centre lay over Antrim, moving north-eastwards. To this system the gales and rain of Friday were due. The arrival of a subsidiary or secondary depression on Saturday in more southern latitudes equalised pressure and caused a fine day in Ireland. In Dublin the barometer ranged from 30·128 inches at 9 a.m. of Monday (wind, W.) to 29·531 inches at 6 p.m. of Friday (wind, W.S.W.). The screened thermometers rose to 75·4° on Friday and fell to 52·5° on Thursday. Westerly winds prevailed and were often strong and squally. The rainfall on four days amounted to 1·103 inches, ·409 inch being measured on Thursday.

High winds, heavy rains, and spells of fine hot weather made up the record of the week ended Saturday, the 13th. Sunday was fine until evening, when there were heavy showers and some lightning was seen. At night a cyclonic system advanced to Brittany from the westward. This disturbance subsequently travelled across the North of France, Belgium, and Holland, to Denmark. In its passage it caused very heavy rains in England and on the Continent, and thunder and lightning occurred in some localities in Great Britain. A cold night was experienced in Ireland on Tuesday and a few hours later a new depression brought heavy rain and strong, squally S. to S.W. windows to Ireland and Scotland. At 8 a.m. of Wednesday the barometer was down to 29·46 inches in the Hebrides. An anticyclone now formed over Germany, spreading westward across the S. of England. The weather became fine and warm and so remained until Friday, when another rainstorm passed over Ireland from S. to N. At this time the thermometer ranged very high in Great Britain, rising to 80° in London and at Cambridge on Thursday, and to 85° in these places on Friday. Saturday was fair and warm in Dublin and its vicinity. The mean height of the barometer was 29·914 inches, pressure rising to 30·163 inches at 9 a.m. of Tuesday (wind, N.W.) and falling to 29·676 inches at 5.30 p.m. of Friday (wind, S.S.W.). The corrected mean temperature was 60·9°. The mean dry-bulb temperature at 9 a.m. and 9 p.m. was 60·2°. The screened thermometers fell to 47·2° on Tuesday and rose to 73·1° on Saturday. The rainfall was ·866 inch on five days, ·413 inch being registered on Tuesday. The prevailing winds were S.W. and N.W. They were often strong in force and squally. Solar halos were seen on Sunday and Tuesday.

The words "warm but unsettled" best describe the weather of the week ended Saturday, the 20th. There were no large or deep atmospheric depressions, but the barometer was unsteady, and shallow "thunderstorm depressions" formed from time to time. In the earlier part of the week the irregularities in pressure were most marked over France and England. Very little rain fell in the London district, where the heat was almost tropical, the thermometer in the shade rising to 85° on Sunday, 87° on Monday, and 83° on Tuesday. On Monday night faint sheet lightning was seen frequently on the extreme S.E. horizon from the Dublin and Wicklow coasts. A sharp thunderstorm prevailed over the S. of England. Tuesday and Wednesday were beautifully fine in Dublin, but on Wednesday night a violent thunderstorm broke out in the S.W. of Ireland, thence spreading out northwards and eastwards over both Ireland and England. These disturbances were caused by a large shallow depression (with its secondaries) which spread slowly northwards from the Peninsula to the S.W. of Ireland between Wednesday and Friday. In Dublin there was no thunder, but the air was murky and damp on Thursday and Friday and rain fell at times. Saturday proved finer and very warm after a rainy morning. In Dublin the barometer read on the average 30·083 inches, the range being from 29·955 inches at 9 a.m of Sunday (wind, S.S.W.) to 30·177

inches at 9 a.m. of Wednesday (wind, E.N.E.). The corrected mean temperature was 62·2°. The mean dry-bulb reading at 9 a.m. and 9 p.m. was 61·6°. The screened thermometers rose to 73·3° on Sunday and fell to 51·7° on Wednesday. The prevalent wind was first W.N.W., then E. Rain fell on four days to the amount of ·234 inch, ·134 inch being measured on Friday. Lightning was seen on Monday evening. Fog occurred on Friday and Saturday.

Unsettled in Ireland, the week ended Saturday, the 27th, was hot and fine in the S.E. of England, the thermometer rising to 89° in the shade in London on Monday. The great heat, however, in the metropolitan district gave way on Tuesday. At the beginning of the week a severe thunderstorm passed across the S.E. of Ireland and the S. of Wales. After dusk on Sunday a magnificent display of chain lightning was seen over the sea from the Dublin and Wicklow coasts. On Tuesday morning a V-shaped depression lay over Wales, the Bristol Channel, Devon, and Cornwall. In its rear northerly winds prevailed in Ireland, bringing fine and cool weather. On Wednesday the thermometer rose only to 63·0° in Dublin. During this day and Thursday an area of high barometric pressure passed slowly eastwards, causing very fine and pleasant weather. On Thursday afternoon the approach of a depression caused a break in the weather, and at night a small subsidiary passed eastwards across Ireland, reaching Wales on Friday morning. This disturbance brought a downpour of rain to central and eastern Ireland—the measurement at Parsonstown was 1·06 inches, in Dublin ·99 inch, on Friday morning. The main depression kept the weather dull, unsettled and showery to the close of the week. In Dublin the mean atmospheric pressure was 29·987 inches, the barometer rising to 30·271 inches at 9 p.m. of Wednesday (wind, W.) and falling to 29·627 inches at noon of Saturday (wind, W.S.W.). The corrected mean temperature was 60·5°. The mean dry-bulb reading at 9 a.m. and 9 p.m. was 60·1°. The screened thermometers rose to 72·8° on Monday and fell to 49·9° on Thursday. Rain fell on four days to the amount of 1·238 inches, ·991 inch being registered on Thursday. Thunder and lightning occurred on Sunday. S. and N.W. winds prevailed.

Stormy, changeable weather prevailed from Sunday, the 28th, to Tuesday, the 30th. On the latter day a deep depression travelled rapidly eastwards from the North of Ireland across the South of Scotland. It caused heavy rains in North Britain and a fresh gale in Ireland. This disturbance was followed by anticyclonic conditions and fine, cool weather on Wednesday, the 31st.

The rainfall in Dublin during the eight months ending August 31st amounted to 16·516 inches on 124 days, compared with 19·388 inches on 149 days in 1897, 14·464 inches on 120 days in 1896, 9·455 inches on 96 days during the same period in 1887, and a twenty-five years' average of 17·558 inches on 128·1 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in August was 3·185 inches on 18 days, compared with 6·195 inches on 27 days in 1897, 1·245 inches on 14 days in 1896, and 4·735 inches distributed over 24 days in 1895. Of this quantity ·620 inch fell on the 25th. The total fall since January 1 amounts to 17·830 inches on 112 days, compared with 25·945 inches on 143 days in 1897, 14·327 inches on 91 days in 1896, 22·685 inches on 107 days in 1895, 25·206 inches on 131 days in 1894, and 16·341 inches on 106 days in 1893.

At the National Hospital, Newcastle, Co. Wicklow, the rainfall in August was 3·803 inches on 16 days, compared with 4·526 inches on 20 days in 1897, ·716 inch being measured on the 25th and ·670 inch on the 12th. Since January, 1898, the rainfall at this Second Order Station has been 20·101 inches on 110 days. The maximal temperature in the shade in August was 75·0° on the 2nd, the minimum temperature was 48·1° on the 29th.

SEPTEMBER.—September, 1898, was a warm, dry, summerlike month. It recalled memories of the wonderful September of 1865, when the mean temperature in Dublin reached 61·4° and the rainfall was only ·056 inch on 3 days. In the S.E. of England torrid heat prevailed in the early part of the month, and the London district in particular was parched with drought, as well as burned with heat. In Ireland generally the rainfall was up to the average as on several occasions torrential rains fell in connection with V-shaped depressions passing northwards or north-eastwards across this island.

In Dublin the arithmetical mean temperature (60·2°) was much above the average (55·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 58·7°. In the thirty-three years ending with 1897, September was coldest in 1886 and in 1882 (M. T.=53·0°), and warmest in 1865 (M. T. = 61·4°), and in 1890 (M. T. = 59·6°).

The mean height of the barometer was 30·036 inches, or 0·126 inch above the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·406 inches at 9 p.m. of the 3rd, and fell to 29·416 inches at 5.30 p.m. of the 29th. The observed range of atmospheric pressure was, therefore, ·990 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 58·7°, or 1·5° below the value for August, 1898. Using the formula, *Mean Temp.* $= Min. + (max. - min. \times \cdot 476)$, the mean temperature was 59·8°, or 4·3° above the average mean temperature for September, calculated in the same way, in the twenty-five years, 1865–89. inclusive (55·5°). The arithmetical mean of the maximal and minimal readings was 60·2°, compared with a twenty-five years' average of 55·8°. On the 6th the thermometer in the screen rose to 77·8°—wind, S.W.; on the 25th the temperature fell to 43·0°—wind, W. The minimum on the grass was 37·9°, on the 29th.

The rainfall was 1·452 inches, distributed over 13 days. The average rainfall for September in the twenty-five years, 1865–89, inclusive, was 2·176 inches, and the average number of rainy days was 14·7. In 1871, the rainfall was very large—4·048 inches on, however, only 13 days. In 1896, no less than 5·073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865, only ·056 inch was measured on but 3 days.

High winds were noted on 9 days, and attained the force of a gale on three occasions in Dublin—the 18th, 29th, and 30th. The atmosphere was foggy on the 4th, 15th, and 25th. Solar halos were seen on the 7th and 8th; lunar halos on the 28th and 30th; lightning on the 16th. There was a magnificent aurora borealis on the evening of the 9th.

With the coming of September the weather became extremely fine, warm, and in all respects summerlike. An anticyclone formed on Thursday, the 1st, in the wake of a depression which had passed quickly eastwards across the British Isles during the closing days of August. On the morning of Friday, the 2nd, a new depression in the far North temporarily broke up the high-pressure system, which, however, formed again on Saturday—a brilliant and hot day. At 9 p.m. the barometer rose to 30·406 inches (wind, S.E.). On Friday the screened thermometers rose to 74·4°, having fallen to 48·5° on Thursday, on the morning of which day Snowdon was clearly seen from the Wicklow coast.

A remarkable wave of heat passed over France and the British Islands during the week ending Saturday, the 10th. It culminated on Thursday, when the thermometer rose in the shade to 88° at Brussels, 89° in Paris, 90° at Oxford and Loughborough, 91° in London and at Lyons, 92° at Cambridge, and 99° at Rochefort. At this time a heavy rainstorm passed over Ireland, ·51 inch of rain falling at Donaghadee, ·52 inch in Dublin, ·93 inch at both Parsonstown and Valentia, and ·98 inch at Roche's Point. Until Wednesday an anticyclone stretched westward across Great Britain to Ireland, and light or moderate easterly to southerly winds prevailed. As the amount of cloud was small the sun's rays held uninterrupted sway, with the result that temperature rose daily higher and higher. Even in Dublin a maximum of 77·8°—the highest reading of the season—was recorded on Tuesday. On Wednesday the weather was less fair in Ireland owing to the approach of a large but shallow depression to the west coast. A good deal of rain fell over the western half of this country, but only a small quantity in the east. On Thursday night a V-shaped depression passed north-eastward across Ireland. It brought thunder and lightning to some stations and a general downpour of rain. In the rear of this low pressure system a brisk fall of temperature occurred and the sky cleared with a N. or N.W. wind. On Friday evening an exceptionally brilliant display of aurora borealis occurred. Saturday was dull to fair and warm. In Dublin the mean height of the barometer was 30·044 inches, pressure ranging from 30·373 inches at 9 a.m. of Sunday (wind, S.E.) to 29·883 inches at 9 p.m. of Thursday (wind, S.S.W.). The corrected mean temperature was 64·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 62·8°. On Tuesday the screened thermometers rose to 77·8°, on Saturday they fell to 53·7°. Rain fell on four days to the amount of ·607 inch, ·523 inch being measured on Thursday. The wind was at first S.E., then N.W.

Taken as a whole the weather of the week ended Saturday, the 17th, may be looked on as fine and warm. At the beginning and close a cyclonic distribution of atmospheric pressure prevailed, but from Wednesday to Friday the barometer was high, the isobar of 30·4 inches being found over Germany on Thursday and Friday. A good deal of rain (·149 inch) fell in Dublin on Sunday, when a V-shaped depression passed eastwards across Ireland, reaching Belgium on Monday morning. This disturbance gave even London some showers (·040 inch). There was another depression on Tuesday. As it passed away a large area of high pressure spread across England and Ireland from the Continent. Its S. winds were accompanied by another heat wave in which the thermometer rose slightly above 80° in the S.E. of England on Thursday. Next day the barometer gave way in Ireland, and lightning was seen at night. Saturday was changeable and showery with thunder in places. In Dublin the mean height of the barometer was 30·027 inches, pressure ranging between 30·313 inches at 9 a.m. of Thursday (wind, calm), and 29·680 inches at 6 p.m. of Saturday (wind S.S.W.). The corrected mean temperature was 62·3°. The mean dry bulb reading was 61·6°. On Wednesday the screened thermometers rose to 72·6°, on Monday they fell to 48·0°. The rainfall was ·274 inch, on three days, ·149 inch being measured on Sunday, and ·112 inch on Saturday. Westerly winds predominated. Lightning was seen on Friday evening. The rainfall at Greystones, county Wicklow, was ·146 inch on four days.

A decided fall in temperature was the most striking feature in the weather of the week ended Saturday the 24th. On Sunday a large V-shaped atmospheric depression passed eastwards across the British Islands. At 8 a.m. southerly winds and high temperatures were found over England, while a northerly gale was blowing in Ireland, where temperature was from 10° to 18° lower than on the previous morning. Even in the S.E. and S. of England a brisk fall of temperature occurred —so brisk that, whereas on Saturday, September 17, the shade thermometer had risen to 86° at Oxford, 87° at Loughborough, 88° in London, and 89° at Cambridge, on Sunday night the minima were—44° at Loughborough, 42° at Oxford, and 41° in London and at Cambridge. A recovery of temperature subsequently took place, but it proved transitory, for after an anticyclone had formed over the British Isles on Thursday, the shade thermometer fell at night to 39° at Cambridge and York, 38° at Parsonstown and Leith, 36° at Loughborough and Stornoway, and 34° at Nairn. Friday night gave readings of 32° at Loughborough and 31° at Nairn. On Wednesday quite a considerable rainfall took place in Dublin, amounting to ·099 inch. It was due to a shift of wind from W. to N.E. in connection with a large but shallow depression over the Peninsula and the Bay of Biscay. The last three days were cloudy and hazy to fair and bright. The nights were cool and heavy dews fell in the open fields. In Dublin the mean height of the barometer was 30·070 inches, pressure ranging from 29·831 inches at 9 a.m. of Sunday (wind, N.W.) to 30·232 inches at 9 a.m. of Friday (wind, E.S.E.). The corrected mean temperature was 57·8°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 55·9°. The screened thermometers rose to 70·9° on Tuesday and fell to 48·2° on Saturday. On Thursday the maximum was only 57·8°. The rainfall was ·160 inch on two days, ·099 inch being registered on Wednesday. At first westerly, afterwards easterly winds prevailed.

The closing days of September (25th–30th) witnessed the substitution of cyclonic for anticyclonic conditions over the British Isles, and a complete break in the weather, which became stormy, cold, and rainy—first in Ireland and afterwards in Great Britain also. On the first two days the centre of a dispersing anticyclone was found over the N.E. of England. The weather was quiet and fine, with a large diurnal range of temperature at inland stations. Thus, at Loughborough, Leicestershire, the shade thermometer rose to 59° on Sunday and fell to 29° during the ensuing night—a range of 30° F. in very few hours. On Tuesday morning a V-shaped depression advanced across Ireland, where rain fell heavily and the wind shifted from S.E. to N.W. as the trough of low atmosphere pressure passed by. In the rear of this disturbance Wednesday proved fine and bracing, but a lunar halo at night heralded the approach of a new and even deeper depression from the westward. This system caused extremely heavy rains in many places and gales of winds from N.W. or N. when the centre had passed by. Even in England there was an abundant rainfall on Friday. A lunar halo was again seen on Friday night. In Dublin the barometer ranged between 29·416 inches at 5.30 p.m. of Thursday (wind, W.) and 30·166 inches at 9 p.m. of Friday (wind also W.). The shade thermometers fell to 43·0° on Sunday and rose to 63·0° on Monday. The rainfall was ·411 inch on four days, ·210 inch being measured on Tuesday. S.E. and N.W. winds alternated with each other.

The rainfall in Dublin during the nine months ending September 30th amounted to 17·968 inches on 137 days, compared with 10·968 inches on 112 days during the same period in 1887, 21·971 inches on 165 days in 1897, and a twenty-five years' average of 19·734 inches on 142·8 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·858 inches distributed over 12 days. Of this quantity ·530 inch fell on the 8th. At that station the rainfall since January 1, 1898, has been 19·688 inches on 124 days, compared with 17·091 inches on 118 days in the same nine months of 1893, 25·896 inches on 137 days in 1894, 23·665 inches on 117 days in 1895, and 21·912 inches on 115 days in 1896, and 29·570 inches on 158 days in 1897.

At Cloneevin, Killiney, Co. Dublin, the rainfall in August was 2·79 inches on 20 days (the maximal fall in 24 hours being ·90 inch on the 25th), compared with a twelve years' average of 2·887 inches on 16·5 days. In September 1·46 inches fell at Cloneevin on 12 days. The maximal fall in 24 hours was ·40 inch on the 27th. On an average of twelve years the September rainfall at this station has been 1·773 inches on 12·1 days. Since January 1st, 1898, 18·19 inches of rain have fallen at Cloneevin on 136 days. The rainfall in the first nine months of the year at Cloneevin was 22·92 inches on 150 days in 1894, 21·58 inches on 129 days in 1895, 20·50 inches on 129 days in 1896, and 22·91 inches on 158 days in 1897.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell in measurable quantity on 12 days during September to the total amount of 1·991 inches, compared with 3·166 inches on 11 days in the same month of 1897. The maximal fall in 24 hours was ·538 inch on the 27th. Since January 1, 1898, the rainfall at this Second Order Station has been 22·091 inches on 122 days. The highest temperature in the screen was 72·5° on the 2nd and 14th, the lowest was 41·7° on the 29th.

October.—October, 1898, was singularly mild—the mean temperature being more than 3° above the average. The first 12 days were generally fine and dry, the only rainfall occurring on the night of the 8th and morning of the 9th. On and after the 13th, however, rain fell in Dublin daily up to and including the 30th—that is, on 18 consecutive days.

In Dublin the arithmetical mean temperature (52·8°) was much above the average (49·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 51·7°. In the thirty-three years ending with 1897, October was coldest in 1892 (M. T. = 44·8°), and in 1896 (M. T. = 45·0°). It was warmest in 1876 (M. T. = 53·1°). The M. T. in 1897 was 52·3°.

The mean height of the barometer was 29·774 inches, or 0·066 inch below the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·365 inches at 9 a.m. of the 4th. and fell to 28·904 inches at 9 p.m. of the 17th. The observed range of atmospheric pressure was, therefore, as much as 1·461 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 51·7°, or 7·0° below the value for September, 1898. The arithmetical mean of the maximal and minimal readings was 52·8°, compared with a twenty-five years' average of 49·7°. Using the formula, *Mean Temp.* = *Min.* + (*max.* — *min.* × ·485), the mean temperature was 52·7°, or 3·2° above the average mean temperature for October, calculated in the same way, in the twenty-five years, 1865–89 inclusive (49·5°). On the 3rd the thermometer in the screen rose to 64·8°—wind, E.; on the 12th, the temperature fell to 40·0°—wind, calm. The minimum on the grass was 34·0°, on the 20th. The thermometer did not sink to or below 32° in the screen, or even on the grass.

The rainfall was 3·579 inches, distributed over 19 days—the rainfall and the rainy days were decidedly above the average. The average rainfall for October in the twenty-five years, 1865–89, inclusive, was 3·106 inches, and the average number of rainy days was 17·6. In 1880 the rainfall, in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1890, only ·639 inch fell on but 11 days; in 1884, only ·834 inch on but 14 days; and in 1868 only ·856 inch on 15 days.

Lightning was seen on the night of the 11th. High winds were noted on 10 days, and attained the force of a gale on two occasions—the 15th, and 16th. The atmosphere was more or less foggy in Dublin on the 1st, 3rd, 4th, 12th, 20th, 21st, 28th, and 29th. A lunar halo appeared on the 26th.

Saturday, the 1st, was at first foggy and cloudy, afterwards dull with slight rain, and mild.

Very favourable weather prevailed almost to the close of the week ended Saturday, the 8th During the earlier days of the period an anticyclone of large size and much staying power lay directly over the British Islands, where the weather was fine and quiet. On Tuesday this system

began to move away towards N.E., while it increased somewhat in intensity, the barometer rising above 30·40 inches in its centre. The result was that freshening E. and S.E. winds sprang up in the English Channel and over England and Ireland generally, while the area of calms passed northwards to Scotland. On Thursday an area of low atmospheric pressure showed itself off the S.W. of Ireland and began at the same time to spread eastwards, still further steepening gradients for S.E. winds, and causing a gale from that point and rain in the S. and S.W. of Ireland. On Monday and Tuesday thick fogs were experienced in the Irish Sea and the sky subsequently remained densely clouded. A remarkable feature of the week's weather was the warmth felt in the north of Scotland by day and the great diurnal range of temperature in that locality. On Monday the thermometer rose to 73° at Wick, on Tuesday the range at the same station was from 71° to 40° (31° in a few hours). In Dublin the mean height of the barometer was 30·147 inches, pressure ranging from 30·365 inches at 9 a.m. of Tuesday (wind, calm) to 29·856 inches at 9 p.m. of Saturday (wind, S.E.). The corrected mean temperature was 57·9°. The mean dry-bulb reading at 9 a.m. and 9 p.m. was 56·7. On Monday the screened thermometers rose to 64·8°, on Tuesday they fell 48·3°. E. to S.E. winds prevailed. Rain fell on Saturday night and Sunday morning (the 9th) to the amount of ·222 inch. The rainfall at the Botanic Gardens, Glasnevin, on Saturday night and Sunday morning amounted to ·540 inch.

In the week ended Saturday, the 15th, the weather, at first fine, although cold, finally became very broken, dull, stormy, and wet. At both the beginning and close the distribution of atmospheric pressure was cyclonic. In the interval an anticlycone of but slight intensity formed over the British Islands, causing calm, cold, foggy nights, but fine days. From Wednesday onward a large area of low pressure kept spreading eastward over the kingdom from the S.W. of Ireland, in which locality rain fell in torrents, the measurement at Roche's Point, Co. Cork, being 3·6 inches. On Sunday morning a V-shaped depression stretched southeastwards from Donegal to the mouth of the English Channel. The weather was fine and cool after heavy rain in Ireland, while rain fell during the day in many parts of Great Britain. A shallow depression formed over the Continent on Monday, lasting until Thursday. This system caused heavy rain on the Norkfolk coast and thunder and lightning in some places on Tuesday night. On Thursday a large depression came in over Ireland while calms and fogs or light E. winds prevailed in England. On Friday morning a small secondary depression was found near Cork, and it was in connection with it that rain fell so heavily in the S.W. of Ireland. Friday and Saturday were dull rainy days even in Dublin. The mean height of the barometer in this city was 29·796 inches, pressure ranging from 30·152 inches at 9 p.m. of Tuesday (wind, N.W.) to 29·147 inches at 9 p.m. of Saturday (wind, E. by S.). The corrected mean temperature was 50·9°. The mean dry-bulb temperature was 49·8°. On Sunday the shade thermometers rose to 61·8°, on Wednesday they fell to 40·0°. The prevailing winds were first W., then E.S.E., Rain fell on the last three days to the amount of ·746 inch, ·440 inch being recorded on Saturday. Winter set in this week in Scandinavia. At 8 a.m. of Saturday the thermometer read 19° at Hernösand in Sweden.

The exceedingly broken, rainy weather. which set in towards the close of the previous week, continued during the greater part of the week ended Saturday, the 22nd. On Sunday, the 16th, a large and deep depression was central at the mouth of St. George's Channel, where the barometer was below 28·9 inches. An easterly gale blew with little intermission on the east coasts of both Great Britain and Ireland, while rain fell heavily in many places, and the sky wore a most gloomy aspect. By Monday morning the centre of the depression reached Cornwall and the mouth of the English Channel, the barometer reading 28·63 inches at St. Mary's, Scilly Islands, and 28·65 inches at Brest. The wind now backed to N.E. and N. in Ireland, blowing as strongly as before. On Tuesday morning two minima of pressure were found—over Anglesea and near London respectively—but the depression was beginning to fill up. Wet weather continued, but the storm-area passed northwards to Scotland and the north of Ireland. All this time cold, anticyclonic weather held in Scandinavia and to this fact the rains and gales of the period in the British Isles must in some measure be attributed. After Wednesday a succession of depressions passed northwards along the western coasts of Ireland and of Scotland. On Friday and Saturday a brisk rise of temperature occurred. In Dublin the mean height of the barometer was 29·351 inches, pressure ranging from 28·904 inches at 9 p.m. of Monday (wind, N·E.) to 29·792 inches at 9 p.m. of Saturday (wind, S.W.) The corrected mean temperature was 51·3°. The screened thermometers sank to 40·2° on Thursday and rose to 63·9° on Saturday. The mean dry-bulb reading at 9 a.m. and 9 p.m. was 50·3°. The rainfall was 1·536 inches on 7 days, ·808 inch falling on Monday. At first N.E. then S.W., winds prevailed.

Mild, but changeable and, in the neighbourhood of Dublin, dull, damp, and often rainy weather prevailed throughout the week ended Saturday the 29th. The general distribution of atmospheric pressure was anticyclonic over France and Germany, cyclonic in the N.W. and N. of Europe. At first gradients were rather steep over the British Isles for S.W. to W. winds, and accordingly the wind blew strongly and in squalls from those points. Rain fell tolerably generally in the form of showers during the first few days, but the measurement was not large, except in the Hebrides, where the rainfall up to Friday morning totted to 3·08 inches. At 8 a.m. of Wednesday the barometer read 30·33 inches at Lyons, but only 29·17 inches in the Shetlands. On Thursday a shallow secondary depression formed over Ireland and St. George's Channel. This led to a light easterly or southeasterly breeze and very dull, rainy weather in North Wales and on the east coast of Ireland. A brief spell of fine weather in Dublin on Saturday forenoon was followed by a return of clouds and east wind and a downpour of rain in the evening. In Dublin the mean height of the barometer was 29·829 inches pressure ranging from 30·024 inches at 9 p.m. of Sunday (wind, W.S.W.) to 29·322 inches at 9 p.m. of Saturday (wind, N.W.). The corrected mean temperature was 52·2°. The mean dry-bulb temperature at 9 a.m. and 9 p.m. was 51·2°. The screened thermometers fell to 46·2° on Monday and Tuesday, and rose to 59·8° on Wednesday. The prevailing wind was W.S.W. Rain fell daily, the total measurement being ·694 inch, of which ·317 inch was measured on Saturday

Rain fell heavily about midday on Sunday, the 30th. The 31st was cool, bright, and dry.

The rainfall in Dublin during the 10 months ending October 31st amounted to 21·547 inches on 156 days, compared with 12·366 inches on 123 days during the same period in 1887 (the dry year), 22·052 inches on 165 days in 1896, 24·081 inches on 179 days in 1897, and a twenty-five years' average of 22·840 inches on 160·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in October amounted to 4·489 inches on 16 days. Of this quantity ·685 inch fell on the 17th, and ·680 on the 15th. From January 1st, 1898, up to October 31st, rain fell at Knockdolian on 140 days to the total amount of 24·177 inches. In 1893, the rainfall of the corresponding ten months was 17·801 inches on 133 days; in 1894, 32·221 inches on 154 days; in 1895, 26·270 inches on 131 days; in 1896, 27·837 inches on 137 days; and in 1897, 32·730 inches on 171 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall in October was 3·53 inches on 18 days, compared with ·710 inch on 14 days in 1893, 6·460 inches on 17 days in 1894, 2·650 inches on 14 days in 1895, 5·230 inches on 21 days in 1896, 2·280 inches on 11 days in 1897, and a thirteen years' average (1885-1897) of 3·303 inches on 15·8 days. On the 17th, ·85 inch fell. Since January 1, 1898, 21·72 inches of rain have fallen at this station on 154 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in October was 4·385 inches on 17 days, compared with 3·175 inches on 13 days in October, 1897. Of this quantity 8·20 inch was recorded on the 15th, and ·660 inch on the 8th. The highest temperature in the screen was 67·° on the 4th, the lowest was 37·7° on the 20th. At this Second Order Station the rainfall from January 1 to October 31, inclusive, amounted to 26·476 inches on 139 days.

NOVEMBER.—November, 1898, was a month of surprises. Opening mild and changeable, with fresh S.W. winds, it afterwards became fine, quiet, and at times foggy. A brief period of frost on the 22nd was followed by a rainstorm of exceptional severity and persistence; so that in four days 3·230 inches of rain fell in Dublin; 3·58 inches at Cloneevin, Killiney; 4·72 inches at Fassaroe, Bray; 3·578 inches at Newcastle, Co. Wicklow; 3·350 inches at Greystones; 4·18 inches in the Phœnix Park; and 3·330 inches at Glasnevin. Another cold spell followed this storm, but the last day of the month was mild.

In Dublin the arithmetical mean temperature (46·2°) was decidedly above the average (44·7°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 45·6°. In the thirty-three years ending with 1897, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°), warmest in 1881 (M. T. = 50·3°). In 1897 the M. T. was 48·6°.

The mean height of the barometer was 29·789 inches, or 0·071 inch below the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·312 inches at 9 p.m. of the 18th, and fell to 28·761 inches at 9 a.m. of the 25th. The observed range of atmospheric pressure was, therefore, 1·551 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 45·6°, or 6·1° below the value for October. The arithmetical mean of the maximal and minimal readings was 46·2°, compared with a twenty-five years' average of 44·7°. On the 2nd the thermometer in the screen rose to 62·7°—wind, S.W.; on the 22nd the temperature fell to 29·0° —wind, W.S.W. The minimum on the grass was 26·2°, also on the 22nd.

The rainfall was 4·435 inches, distributed over 17 days—the rainfall was much above, while the rainy days were equal to the average. The average rainfall for November in the twenty-five years, 1865-89, inclusive, was 2·452 inches, and the average number of rainy days was 17·0. In 1888, 6·459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only ·664 inch on 9 days. In 1897, 3·422 inches fell on 14 days.

High winds were noted on 7 days, and attained the force of a gale on the 2nd and 3rd. The atmosphere was more or less foggy in Dublin on the 8th, 9th, 10th, 15th, 17th, 19th, and 27th. Solar halos were seen on the 1st and 22nd. Hail, or sleet and snow fell on the 3rd, 22nd, 25th and 29th. Lightning was seen on the 3rd, 27th, and 28th, and a thunderstorm occurred on the morning of the 26th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 25·982 inches on 173 days, compared with 15·378 inches on 141 days during the same period in 1887, 22·716 inches on 174 days in 1896, 27·503 inches on 193 days in 1897, and a twenty-five years' average of 25·292 inches on 177·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in November was 4·609 inches, distributed over 16 days. Of this quantity 1·900 inches fell on the 23rd. From January 1, 1898, up to November 30, rain fell at that station on 156 days, and to the total amount of 28·786 inches. The corresponding figures for 1897 were 38·185 inches on 188 days.

At Cloneevin, Killiney, Co. Dublin, 5·05 inches of rain fell on 19 days, compared with a thirteen years' average of 2·755 inches on 16·9 days. The maximal fall in 24 hours was 2·06 inches on the 23rd. Since January 1, 1898, 26·77 inches of rain have fallen at this station on 173 days. The corresponding figures for 1897 were 28·64 inches on 184 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in November was 4·721 inches, distributed over 18 days. The maximal fall in 24 hours was 1·652 inches on the 23rd. Since January 1, 1898, the rainfall at Newcastle has amounted to 31·197 inches on 157 days. The corresponding figures for 1897 were 35·528 inches on 172 days. On November 16th the screened thermometers at the National Hospital rose to 62·2°, on the 29th they fell to 31·0°.

DECEMBER.—The closing month of 1898 was the warmest December on record for many decades. The mean temperature in Dublin was 6·3° above the average. There was scarcely a trace of frost, and snow, sleet and hail were entirely absent. Fresh to strong south-westerly and westerly winds prevailed throughout the month. The rainfall was not half the average, while the rainy days

much exceeded it. The highest daily temperatures were sometimes reached at night, as is not unusual in cyclonic or south-westerly weather during the winter months.

In Dublin the arithmetical mean temperature (47·6°) was much above the average (41·3°), the mean dry bulb readings at 9 a.m. and 9 p.m. were 47·0°. In the thirty-three years ending with 1879, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°), and warmest, in 1865 (M. T. = 46·2°). In 1897, the M. T. was 44·9°. December, 1898, accordingly establishes a record in the matter of high mean temperature.

The mean height of the barometer was 29·925 inches, or 0·050 inch above the corrected average value for December—namely, 29·875 inches. The mercury rose to 30·543 inches at 9 a.m. of the 20th and fell to 28·985 inches at 9 a.m. of the 29th. The observed range of atmospheric pressure was, therefore, 1·558 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 47·0°, or actually 1·4° *above* the value for November. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·52), the value was 47·7°, or 6·2° above the average mean temperature for December, calculated in the same way, in the twenty-five years, 1865-89, inclusive (41·5°). The arithmetical mean of the maximal and minimal readings was 47·6°, compared with a twenty-five years' average of 41·3°. On the 5th the thermometer in the screen rose to 58·8°—wind, S.W.; on the 20th the temperature fell to 32·1°—wind, W.N.W. The minimum on the grass was 28·4°, on the 30th. There was no frost in the screen, but 6 days of frost on the grass were recorded.

The rainfall was 1·066 inches, distributed over as many as 21 days. The average rainfall for December in the twenty-five years, 1865-89, was 2·404 inches, and the average number of rainy days was 16·9. The rainfall, therefore, was much below, while the rainy days were above the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1872, 4·932 inches fell on as many as 24 days; and in 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; in 1885, only ·742 inch on 10 days; in 1892, only ·795 inch on 10 days; and in 1871, only ·797 inch on 15 days. In 1897, 1·841 inches of rain fell on 18 days.

A lunar halo was seen on the 28th. High winds were noted on 22 days, and attained the force of a gale on five occasions—the 2nd, 10th, 12th, 27th, and 31st. The atmosphere was more or less foggy in Dublin on the 8th, 15th, and 17th. There was no snow, or sleet, or hail.

The rainfall in Dublin during 1898 amounted to 27·048 inches on 194 days, compared with 29·344 inches on 211 days in 1897, 26·901 inches on 194 days in 1896, 31·242 inches on 194 days in 1895, 29·261 inches on 209 days in 1894, only 20·493 inches on 174 days in 1893, 25·644 inches on 196 days in 1892, 27·820 inches on 184 days in 1891, 27·562 inches on 200 days in 1890, 27·272 inches on 193 days in 1889, 28·679 inches on 190 days in 1888, 16·601 inches on 160 days in 1887, and a twenty-five years' average of 27·696 inches on 194·3 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in December, 1898, was 1·760 inches, distributed over 15 days. Of this quantity ·540 inch fell on the 26th. From January 1st to December 31st, 1898, rain fell at Knockdolian on 171 days, to the total amount of 30·546 inches. The corresponding figures for 1893 were 22·526 inches on 170 days; for 1894, 38·776 inches on 184 days; for 1895, 35·135 inches on 174 days; for 1896, 36·102 inches on 169 days, and for 1897, 42·885 inches on 210 days.

Mr. Robert O'Brien Furlong, M.A., writes:—

The rainfall at Cloneevin, Killiney, in December, 1898, was 1·20 inches on 15 days. The maximal fall in 24 hours was ·35 inch on the 30th. The average December rainfall of the twelve years 1885–96, was 2·480 inches on 17·3 days. The total rainfall for 1898, was 27·97 inches, being in excess of the average of the eleven years, 1885–95, viz., 26·58 inches. Rain measuring ·01 inch and upwards fell on 188 days, the average of eleven years being 179.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell during December on 17 days to the amount of 1·940 inches, ·611 inch being measured on the 26th. At this Station of the Second Order the highest temperature in the shade was 58·0° on the 17th, the lowest was 31·9° on the 30th. The rainfall for the year 1898 was 33·137 inches on 174 days, compared with 40·193 inches on 194 days in 1897.

RAINFALL IN 1898,

At 40, Fitzwilliam-square, West, Dublin.

Rain Gauge:—Diameter of funnel, 8 in. Height of top—Above ground, 1 ft. 4 in.; above sea level, 50 ft.

The rainfall was ·648 inch in defect of the average annual measurement of the twenty-five years, 1865–89, inclusive—viz., 27·696 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches, the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell, in 1884, when the measurement was 20·467 inches, and in 1893 with its rainfall of 20·493 inches. In seven of the twenty-five years in question the rainfall was less than 26 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886 when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1886—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days.

In 1898 there were 194 rainy days, or days upon which not less than ·005 inch of rain (five-thousandths of an inch) was measured. This was equal to the average number of rainy days, which was 194·3 in the twenty-five years, 1865–89, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rainy days were only 160, and in 1870 they were only 145.

The rainfall in 24 hours, from 9 a.m. to 9 a.m., exceeded one inch only once in 1898—namely, on November 23rd, when 1·732 inches were measured. In 1892 the daily rainfall twice exceeded 1 inch—viz., May 28th (2·056 inches) and August 16th (1·310 inches). On no occasion in 1893 did one inch of rain fall on a given day in Dublin. In 1894 falls of upwards of an inch of rain in 24 hours were recorded on four occasions, viz., May 15th (1·330 inches); July 24th (1·560 inches); August 25th (1·369 inches); and October 23rd (1·042 inches). In 1895, 1·802 inches fell on January 12th; 1·014 inches on July 24th; and 1·256 inches on July 25th. In 1896, 1·563 inches fell on July 8th; 2·020 inches on July 24th; and 1·388 inches on December 8th. In 1897, 1·166 inches fell on September 1st.

Included in the 194 rainy days in 1898 are 13 on which snow or sleet fell, and 20 on which there was hail. In March hail was observed on 8 days, in April on one day, in May on 5 days, in June on 2 days, and in November, on 4 days. Snow or sleet fell on 9 days in March, and on 4 days in November. Thunderstorms occurred once in May, June, and November. Thunder alone also occurred once in June, July, and August. Lightning was also seen on three occasions in August, once in September and in October, and three times in November.

The rainfall in the first six months was 12·115 inches, on 98 days. The rainfall exceeded 3 inches in May (3·332), August (3·456), October (3·597), and November (4·435). In July it was only ·945 inches on 8 days.

The rainfall was distributed as follows:—4·570 inches fell on 48 days in the first quarter, 7·545 inches on 50 days in the second, 5·853 inches on 39 days in the third, 9·080 inches on 57 days in the fourth and last quarter.

Brilliant aurora borealis was observed on March 15th and September 9th. More or less fog prevailed on 50 occasions—8 in January, 3 in February, 5 in March, 5 in April, 1 in May, and in June, 2 in July, 4 in August, 3 in September, 8 in October, 7 in November, and 3 in December. High winds were noted on 131 days—8 in January, 18 in February, 11 in March, 8 in April, 9 in May, 8 in June, 9 in July, 12 in August, 9 in September, 10 in October, 7 in November, and 22 in December. The high winds amounted to gales (force 7 or upwards according to the Beaufort scale) on 30 occasions—4 in January, 5 in February, 2 in March, 2 in April, 1 in July, 4 in August, 3 in September, 2 in October, 2 in November, and 5 in December.

Abstract of Meteorological Observations taken at Dublin (40, *Fitzwilliam-square, West*), *during the Year* 1898.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is:—+ ·058.

* Including part of the County of the Town of Drogheda.

MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1898.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1898.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	Area in Statute Acres.	Population, 1891.	TOTAL Marriages.	TOTAL Births.	TOTAL Deaths.	Births. Including Illegitimate Births. Males.	Births. Including Illegitimate Births. Females.	Births. Illegitimate Births. Males.	Births. Illegitimate Births. Females.	Deaths. Males.	Deaths. Females.	Excess of Births over Deaths.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.

The letter *W.* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated.

NOTE.—This Table has been constructed for the years 1824 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841 according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872-98—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81 and 1882-91 to allow for the discrepancy between the number thus arrived at for 1881 and 1891 respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, and 1891.

Periods	Sexes.	Ages—Years.														Total.
		Under 1.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85.	85 and under 95.	95 and upwards.

* In 3,838 instances in 1861—2,453 males, and 1,385 females; in 3,769 instances in 1871, viz., 2,176 males, and 1,593 females; in 2,996 instances in 1881, viz., 1,765 males, and 1,231 females; and in 1,786 instances in 1891, viz., 852 males, and 934 females. the age was not stated in the Returns.

INDEX TO SUPERINTENDENT REGISTRARS' DISTRICTS.

[The following Index furnishes a reference to the *Number* or *Numbers* of each Superintendent Registrar's District in the Tables of Abstracts contained in the Report, in which the numbers run consecutively from 1 to 232.]*

A.

Abbeyleix, . . . 45
Antrim, . . . 127
Ardee, . . . 33, 36
Armagh, . . . 136, 185
Athlone, . . . 51, 221
Athy, . . . 12, 46

B.

Bailieborough, . . . 142
Ballina, . . . 212, 228
Ballinasloe, . . . 194, 222
Ballinrobe, . . . 195, 213
Ballycastle, . . . 128
Ballymahon, . . . 30, 52
Ballymena, . . . 129
Ballymoney, . . . 130, 173
Ballyshannon, . . . 150, 168, 207
Ballyvaghan, . . . 67
Balrothery, . . . 6
Baltinglass, . . . 1, 13, 62
Banbridge, . . . 137, 160
Bandon, . . . 76
Bantry, . . . 77
Bawnboy, . . . 143, 208
Belfast, . . . 131, 161
Belmullet, . . . 214
Borrisokane, . . . 108
Boyle, . . . 223, 229

C.

Cahersiveen, . . . 94
Callan, . . . 17, 109
Carlow, . . . 2, 47
Carrickmacross, . . . 178
Carrick-on-Shannon, . . . 209, 224
Carrick-on-Suir, . . . 18, 110, 120
Cashel, . . . 111
Castlebar, . . . 215
Castleblayney, . . . 138, 179
Castlecomer, . . . 19
Castlederg, . . . 186
Castlereagh, . . . 216, 225
Castletown, . . . 78
Cavan, . . . 144
Celbridge, . . . 7, 14, 37
Claremorris, . . . 217
Clifden, . . . 196
Clogheen, . . . 112
Clogher, . . . 180, 187
Clonakilty, . . . 79
Clones, . . . 169, 181
Clonmel, . . . 113, 121
Coleraine, . . . 132, 174
Cookstown, . . . 188
Cootehill, . . . 145, 182
Cork, . . . 80
Corrofin, . . . 68
Croom, . . . 100

D.

Delvin, . . . 53
Dingle, . . . 95
Donegal, . . . 151
Downpatrick, . . . 162
Drogheda, . . . 34, 38
Dromore West, . . . 230
Dublin, North, . . . 8
Dublin, South, . . . 9
Dundalk, . . . 35, 139, 183
Dunfanaghy, . . . 152
Dungannon, . . . 189
Dungarvan, . . . 122
Dunmanway, . . . 81
Dunshaughlin, . . . 10, 39

E.

Edenderry, . . . 15, 25, 40
Ennis, . . . 69
Enniscorthy, . . . 3, 57
Enniskillen, . . . 146, 170, 190
Ennistimon, . . . 70

F.

Fermoy, . . . 82

G.

Galway, . . . 197
Glennamaddy, . . . 198
Glenties, . . . 153
Gorey, . . . 58
Gort, . . . 199
Granard, . . . 31, 54, 147

I.

Inishowen, . . . 154
Irvinestown, . . . 171, 191

K.

Kanturk, . . . 83
Kells, . . . 41, 148
Kenmare, . . . 96
Kilkeel, . . . 163
Kilkenny, . . . 20
Killadysert, . . . 71
Killala, . . . 218
Killarney, . . . 97
Kilmacthomas, . . . 123
Kilmallock, . . . 84, 101
Kilrush, . . . 72
Kinsale, . . . 85

L.

Larne . . . 133
Letterkenny, . . . 155
Limavady, . . . 175
Limerick, . . . 73, 102
Lisburn, . . . 134, 164
Lismore, . . . 124
Lisnaskea, . . . 172
Listowel, . . . 98, 103
Londonderry, . . . 156, 176
Longford, . . . 32
Loughrea, . . . 200
Lurgan, . . . 135, 140, 165

M.

PROSECUTIONS for OFFENCES against the REGISTRATION ACTS during the Financial Year 1898–99.

The total number of offences against the Registration Acts which were reported by Local Officers, and came under investigation in the General Register Office, during the year ended 31st March, 1899, amounted to 478. As regards many of these, the defaulters came forward and complied with the requirements of the law, on becoming aware that proceedings against them were in contemplation, and in a large number of cases it was found that no proceedings could be taken against the responsible parties, as the legal time for doing so had elapsed.

However, after careful inquiry into the circumstances of each case, and an examination of the evidence available, prosecutions were directed against the offenders in 84 cases. In 40 of these the parties were convicted and punished; in 39 cases the proceedings were abandoned, the parties (in most cases) paying the costs of court and complying with the law; in 3 cases the summonses were dismissed; one was returned for trial; and one was pending at the close of the year.

Among the offences dealt with were the following:—Neglect to register births; neglect to register deaths; neglect to furnish certificates of marriage; failure of Coroner to furnish certificate of inquest; giving false information as to age at death, as to the cause of death, and as to duration of illness; giving false information as to births, viz., registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Registrar to produce Quarterly Returns.

The following are a few examples of these cases:—

J. M'C. was prosecuted at Kilrush Petty Sessions for registering a death which did not take place. He was convicted and fined £1 5*s.*, or one month's imprisonment.

F. M'C. was prosecuted at Gortin Petty Sessions for neglecting to register a birth. He was convicted and fined 5*s.* and £1 costs.

T. C. was similarly prosecuted at Athenry Petty Sessions for neglecting to register his child's birth. He was convicted and fined 10*s.* and 2*s.* 6*d.* costs.

M. S. was prosecuted at the Belfast Police Court for giving false information to the Registrar concerning a death. He was convicted and fined £1 with 12*s.* 6*d.* costs.

H. M'C. was prosecuted at Moville Petty Sessions for neglecting to register the death of his child. He was convicted and fined 10*s.* and costs, or 14 days' imprisonment.

A Registrar was prosecuted for failing to produce to the Superintendent Registrar certified copies of the entries made in his Register Books. He was fined 10*s.* and costs.

It is to be regretted that, despite the measures adopted by the Department for the punishment of offenders, several Registrars report that they believe false information is frequently given to them, especially in cases of deaths.

The *modus operandi* in one class of offences appears to be as follows: when a member of a family is entered in a Friendly Society or Industrial Assurance Company, the age is frequently given as much below the real age in order to reduce the amount of the premium payable. After a time the person dies, and then the registry is effected so as to suit the statements previously made to the Society or Company.

However, it sometimes happens that the informant overlooks the fact that the age in the register should correspond with the age in the policy, and, in order to obtain the money, another criminal act is then necessary, namely, making a declaration before a magistrate, altering the age correctly given in the register to an incorrect age, to agree with the age in the policy.

Although the greatest pains have been taken to obtain evidence in these cases to convict the offenders, it is to be regretted that on many occasions the proceedings had to be abandoned for want of documentary proof of age, though no reasonable doubt existed that the offence had been committed.

In several cases the age of a deceased person has been successfully proved from a marriage register, giving the age at time of marriage, and in other cases the age inserted or proposed to be inserted in the register, has been proved to be impossible from the records of the births or baptisms of the children of the deceased; but of course, as a rule, the absence of reliable records of birth or baptism of old persons, makes it exceedingly difficult to deal with cases affecting them.

In addition to the above mentioned, there were a number of cases during the year in which proceedings were taken under the 26 & 27 Vic., cap. 90, before the magistrates at Petty Sessions for corrections in marriage registers, the summonses in these cases being issued at the instance of local Registration Officers.

A sum of £130 was provided in the estimate to meet legal charges. The total cost of the legal service of the Department during the year was £93 8*s.* 8*d.*, of which sum £67 13*s.* 0*d.* was paid for local professional assistance, and £9 17*s.* 0*d.* for mileage to the Registrars.

DUBLIN CASTLE,

18*th December*, 1899.

SIR,

I have to acknowledge the receipt of your letter of the 15th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Thirty-fifth Annual Report of Marriages, Births, and Deaths, Registered in Ireland during the Year 1898.

I am,

Sir,

Your obedient Servant,

D. HARREL.

The Registrar-General,

Charlemont House,

Rutland Square.
